

## SYLLABUS DEL CORSO

### Dalla Diagnosi alle Indicazioni al Trattamento Clinico

2223-1-F5104P008

---

#### Learning area

Methods and techniques of intervention and rehabilitation

#### Learning objectives

##### *Knowledge and comprehension*

- Psychodynamic evaluation of psychopathological patterns and mental functioning in the life cycle
- Psychodynamic-developmental models and trajectories at the basis of normal and pathological functioning
- Adverse and traumatic experiences in the life cycle and implications for therapeutic treatment
- Indications for clinical treatment regarding the different mental functioning modalities considered

##### *Applying knowledge and understanding*

- Ability to evaluate normal and pathological mental functioning
- Ability to identify protection and risk factors with respect to different psychopathological conditions
- Ability to understand the role of traumatic experiences and to evaluate their impact with respect to therapeutic choices
- Ability to clinical reasoning with respect to indications for treatment in the psychodynamic field

#### Contents

The course will promote the acquisition of useful knowledge for the psychodynamic evaluation of the psychopathological patterns in the life cycle and in order to understand the psychodynamic developmental models

at the base of mental functioning, with particular reference to the role of the adverse experiences with respect to the psychopathological risk. It will also focus on the indications useful for treatment in the psychodynamic field.

## **Detailed program**

- Psychodynamic evaluation in a dimensional view of the psychopathological patterns in the life cycle
- Psychodynamic developmental models to understand mental functioning with reference to: attachment styles and emotional regulation, capacity of mentalizing and reflective function, relational and emotional communication skills
- Adverse and traumatic experiences: resilience and risk factors, intergenerational transmission of trauma, effects on psychopathology and implications for the treatment
- Different indications for psychotherapy treatment and for consultation in the psychodynamic field

## **Prerequisites**

Knowledge of the basic principles of dynamic

## **Teaching methods**

Theoretical lectures will be accompanied by the presentation of clinical cases useful to deepen the knowledge of theoretical constructs through the extended discussion in the entire group of students and in small groups.

Furthermore, presentations of articles related to the topics analyzed by the students will be proposed to deepen the knowledge of different constructs.

## **Assessment methods**

The verification of learning will be carried out through a written and oral examinations aimed at verifying the specific knowledge of the main theoretical aspects of the course.

Participation in the optional activities (group presentation, exercises, etc.) proposed during the course contributes to the final evaluation (only for attending students).

Although this course is held in Italian, for Erasmus students, course material can also be available in English, and students can take the exam in English if they wish to do so
