UNIVERSITÀ
DEGLI STUDI DI MILANO-BICOCCA

COURSE SYLLABUS

Astronomical Instrumentation

2223-1-F5802Q010

Aims

Let the student be familiar with the functioning of the modern astronomical instrumentation so that she/he can understand the scientific literature related to instrumentation and be aware of the specific characterisitcs of the instruments getting the data she/is asked to analyze during her/his thesis.

Contents

Introduction to the principles of functioning of the telescopes and electromagnetic, gravitational and particle radiation detectors.

Detailed program

Geometrical optics recals.

Principles of gaussian optics.
Electromagnetic wave polarization: Stokes parameters.

Telescopes:

- main optical schemes
- mountings
- angular resolution
- atmospheric absorption
- seeing

Radio Astronomy:

- single antenna telescopes
- interferometers
- riceivers
- spectrometers
- polarimeters

Millimetric and Sub-millimetric Astronomy:

- telescopes
- etherodyne receivers SIS
- bolometric receivers
- TES
- mKIDS

Infrared Astronomy:

- telescopes
- adaptive/active optics
- infrared arrays

Optical Astronomy:

- telescopes
- CCD cameras
- photometric systems
- spectroscopes

Ultraviolet Astronomy:

- Normal and grazing incidence telescopes
- UV CCD
- Micro-Channel Plates
- Avalanche Photo Diodes

X ray Astronomy:

- grazing incidence telescopes
- coded mask telescopes
- collimators

Gamma ray Astrnomy

- Cerenkov Telescopes
- Showers detectors

Inonizing radiation detectors:

- ionization chambers
- proportional chambers
- Geiger
- scintillators
- photomultipliers
- semiconductor detectors

Gravitational antennas

- Strain Ratio, sensitivity
- Weber Resonators
- Interferometers
- LIGO
- VIRGO
- LISA

Cryogenerators

Heat transfer: conductivity, convectivity, radiation
T>180K fridges
T<180K fridges

- "wet"/"dry"
- ^{3}He fridge
- Dilution fridge
- Adiabatic Demagnetization Refrigerator

Astronomical Coordinates

- Local Coordinates (alt-azi)
- Equatorial Coordinates
- Galactic Coordinates

Prerequisites

Physics 1, Physics 2, Physics 3, Structure of Matters

Teaching form

Front lessons, eventually in streaming if there are students attending from remote.

Textbook and teaching resource

Lesson presentations.

Textbook:

“Electronic Imaging in Astronomy”, McLean, Springer 2008

suggested books:

"Radio Astronomy", John D. Kraus, Cygnus Quasar Books

"Radiation Detection and Measurements", Glenn Knol, Weyley

"Observational Astrophysics", Pierre Lenà, Springer

Semester

Second Semester.

Assessment method

Oral exam consisting of two short seminars about contemporary instruments or space missions.

Office hours

Every day by appointment.

Sustainable Development Goals

QUALITY EDUCATION | INDUSTRY, INNOVATION AND INFRASTRUCTURE | PARTNERSHIPS FOR THE GOALS
