SYLLABUS DEL CORSO

Ecology of tropical marine fish

2223-128R-07

Title

Ecology of tropical marine fish

Teacher(s)

Davide Seveso

Language

English

Short description

The main purpose of the course is to analyze and describe the main families, genera and species of tropical marine fish associated with the reef habitat. The structure of a fish community based on trophic groups and the bioindicator species that compose it will also be addressed, as well as their temporal and spatial variations (nocturnal rhythms, reef zoning). Finally, we will describe the main sampling and monitoring methods adopted to characterize and study the fish fauna and the main threats to its biodiversity.

CFU / Hours

1/8 h
