SYLLABUS DEL CORSO

Geoenergy and Geomechanics

2324-1-124R030

Title

**Geoenergy and Geomechanics

**

Teacher(s)

Riccardo Castellanza ; Giovanni Crosta

Language

English

Short description

This course aims to:

- (i) provide introductory and advanced knowledge relative to deep and shallow geothermal systems and energy, and reservoir behaviour;
- (ii) describe advanced testing for physical and geomechanical characterization focused on reservoir rocks;
- (iii) describe problems concerning the underground storage of gases and fluids.

The course is subdivided in 5 parts:

- (1) Shallow geothermal systems, thermal potential of shallow aquifers, conduction and advection;

- (2) Geothermal systems, description, reservoir fluid characterization, convection cells in porous media;
- (3) Physical mechanical properties and testing methods;
- (4) Definitions of problems concerning the storage of CO₂, methane and other fluids at depth;
- (5) Case studies of heat flow transport

Evaluation: YES

CFU / Hours

2 CFU - 16 Hours (lecture)
