DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Paleontologia

2324-2-E3401Q006

Aims

Basic knowledge on the use of fossils in sedimentary geology.

Contents

Lectures (5,5 ECTS)

Fossils. Fossilization and taphonomy: biostratinomy and diagenesis. Principles of Paleoecology. Introduction to Biogeography and Paleobiogeography.
Principles of Stratigraphy and Biostratigraphy. Systematic paleontology: the main systematic groups of marine invertebrates. Biological evolution: contribution of paleontology.

Laboratory (2 ECTS): identification of diagnostic characters of different groups of fossil invertebrates and practical exercise on biostratigraphy

Field activity (0,5 ECTS).

Detailed program

General Objectives

Lectures (5,5 ECTS:). Types of fossils: body fossils, molds and casts, trace fossils. Information obtained from fossils. Species concept: variation of the species; species nomenclature and typification.
Biostratinomy and diagenesis. Processes of fossilization: types of fossils resulting from the processes.

Principles of paleoecology. Ecological factors. Biogeography and Paleobiogeography: concepts, processes and objectives. Areal distributions. Endemism. Conceptual approaches to biogeography. The dispersion and diffusion. Types of dispersion. Stratigraphy and biostratigraphy: concepts and aims. Units in biostratigraphy. Operation in biostratigraphy and examples of biozones. Biostratigraphical correlations.
Overview of main systematic groups of marine invertebrates 1) the recognition elements, b) stratigraphic evolutionary history and significance, c) paleoecology. The following taxa will be presented: "Protista", Porifera, Coelenterata, Bryozoa, Brachiopoda, Mollusca, Echinodermata, Arthropoda and Hemichordata. Biological evolution: the contribution of paleontology.

Laboratory (2 ECTS). It consists of practicals, based on the examination of fossils in the didactic collection, aimed at recognizing the diagnostic characters of the different taxa. Significance and use of the tables of stratigraphic distribution of fossils.

Field activities (0,5 ECTS). One day trip at important fossiliferous sites. The student is required to produce a personal report of this activity.

Prerequisites

Security on the Field; Principles of geology

Teaching form

The language of the teaching is Italian

- Lectures, 5,5 ECTS:

- Laboratory, 2 ECTS

- Field Laboratory, 0,5 ECTS

Textbook and teaching resource

Manuale di Paleontologia - fondamenti e applicazioni. Edizione a cura della Società Paleontologica Italiana

Allasinaz A., 1999, Invertebrati fossili. UTET, Torino.

Raffi S. & Serpagli E., 1993, Introduzione alla Paleontologia, UTET, Torino.

Slides provided during the lessons.

Semester

II year, I semester

Assessment method

- three intermediate tests during the course, at the end of the main topics covered in classes. Each test consists of 15 multiple choice questions, in order to evaluate the learning of the main concepts of paleontology. Total Midterm grade: average of midterm test marks, in /30. Passing all the intermediate tests allows you to avoid the oral exam. However, the student has the right to take the oral exam and can request it.

- practical test: a) recognition of fossils, which consists in the description of 2 fossils, following the descriptive scheme used during the lessons. The teachers will evaluate the ability to apply the knowledge learned during the laboratory in relation to the recognition of the taxonomic group, based on the identification and description of the diagnostic characters, using the appropriate terminology. Each of the two fossil descriptions receives an evaluation in n/30 between 0 and 12; b) biostratigraphy exercise (identification of biozone); the teachers will evaluate the ability to apply the principles of biostratigraphy. The biostratigraphy exercise has a grade in n/30 between 0 and 6 The total evaluation of the practical test is given by the sum of the evaluations obtained, for a maximum of 30/30.

- report on the field activity, following the guidelines uploaded on elearning. The teachers will evaluate the completeness of the information and diagrams related to the outcrops analyzed during the excursion and the accuracy of the description of the fossils found on the field. The evaluation of the relationship is in n/30.

- oral exam, upon request by the student (mandatory in the absence of the intermediate tests). The exam consists of two questions aimed at assessing the knowledge of Paleontology topics. The teachers will evaluate the knowledge of the topics, the expository clarity, the ability to connect the topics, the use of an appropriate language. The evaluation of the oral exam is in n/30.

The exam is passed if each test obtains a grade ?18/30. The final evaluation will consist of the average of the various tests.
