## SYLLABUS DEL CORSO

### Analisi e Progettazione del Software

2324-2-E3101Q109

---

#### Aims

The student will achieve the skills necessary to develop software projects of medium/large dimensions. In particular the student will be able to analyze a problem, write a requirement specification, analyze and design a solution, implement a component of the analyzed system exploiting the development environment and versioning system introduced in the course.

#### Contents

The main aim of this course is to introduce the software development process, concentrating in particular on the object-oriented analysis and design phases. Another aim is to introduce some Design Patterns.

#### Detailed program

1. Introduction to Software Engineering and the Software Development Process. Agile development processes.
2. Analysis of requirements and specification of use cases
3. OO-Analysis and Design and use of GRASP patterns
4. UML Diagrams
5. Design Patterns
6. Laboratory activities on the use of environments for the development and control of versions
7. Introduction to test driven development.
8. Introduction to Code Refactoring and Code Smell in the Code.

## **Prerequisites**

Knowledge on an object-oriented language like Java.

## **Teaching form**

The lessons of the course are in Italian, with some slides and papers to study in English.

Lessons, laboratory sessions, classroom exercises, laboratory exercises and homework

The lessons will be taken in presence.

## **Textbook and teaching resource**

Larman, Applicare UML e i pattern – analisi e progettazione orientata agli oggetti, Pearson, 5° ed, 2020.

I. Sommerville, Ingegneria del Software, Pearson, 10° ed, 2017. (solo due capitoli).

M. Fowler, UML Distilled, Pearson, last edition.

Slide, articles and tutorials on some topics of the course.

## **Semester**

Second semester

## **Assessment method**

Traditional Examination:

Assessment of learning consists of a written test with exercises and some questions on the entire course syllabus and then a compulsory oral test. The two tests will be graded in thirtieths by making a weighted average between the two tests (tends to be: oral 40% and written 60%).

Pre-examination (just at the end of the lessons):

The assessment for students taking the course consists of an extension of a project assigned during the lab activity and a compulsory oral test. The two tests will be graded in thirtieths by taking a weighted average between the two tests (tends to be: oral 40% and written 60%).

For the grade to be awarded, it is also **STRICTLY REQUIRED** that **BOTH** tests (Project/Written and Oral) be rated **SUFFICIENT** by the teacher. Sufficiency is established by grade thresholds for the two parts (at least 18 in the oral part and at least 16 in the project part).

Assigned exercises during the Labs, graded in a range of 0-4.

The overall activity of the Labs will be evaluated and will allow between 0-4 points that will be added to the final grade if a sufficiency has been obtained in the traditional or pre- examination (at least 18 in the oral test and at least 16 in the written test).

## **Office hours**

Francesca Arcelli Fontana: by appointment.

Oliviero Riganelli by appointment.

## **Sustainable Development Goals**
