DEGLI STUDI DI MILANO-BICOCCA

## COURSE SYLLABUS

### Multivariate Statistical Analysis

2324-2-E4101B037

---

#### Learning objectives

The course aims at introducing multivariate statistical techniques both from the methodological and from the applicative point of view.

#### Contents

The course is composed of the parts: Statistical Models and R (first part, 9 CFU) and Exploratory data analysis (second part, 6 CFU).

- **Statistical Models and R (9 CFU)** provides “hands-on” training for learning how to analyse data in the R statistical software package and offers an introduction to linear regression models. It covers data input/output, data management and manipulation, and how to make useful and informative graphics, as well as how to handle a complete regression analysis.
- **Exploratory Analysis (6 CFU)** offers an introduction to the statistical analysis of multivariate observations with the goal of dimensionality reduction thereby facilitating the understanding of the data.

#### Detailed program

##### First part: Statistical Models and R (9 CFU)

- Introduction to R
- Descriptive statistics with R

- Probability with R
- Inferential statistics with R
- Simple and multiple linear regression
- Model specification
- Parameter estimation
- Linear hypotheses tests
- Diagnostics
- Variable selection
- Prediction

### **Second part: Exploratory Analysis (6 CFU)**

- Graphical representation of multivariate data
- Total and generalized variance
- Spectral decomposition theorem
- Principal components analysis
- Cluster analysis: K-means and hierarchical methods
- Factorial analysis

### **Prerequisites**

Knowledge of the notions given in the courses "Statistics I", "Probability", "Matrix Algebra", and "Statistical inference (Statistics II)" is required.

### **Teaching methods**

Class lectures and lab sessions.

### **Assessment methods**

Students are supposed to pass two written exams (one for each part of the course) and an oral exam (optional). Each written exam consists of questions about theory, numerical exercises and analysis of data sets. The overall mark is obtained by averaging the marks obtained in each part.

## Textbooks and Reading Materials

### First part: Statistical Models and R (9 CFU)

- Lecture notes from the instructor
- Albert, J. & M. Rizzo (2012). *R by Example*. Springer.
- Venables, W. N., Smith D. M. & the R Core Team (2021). [An Introduction to R](#).
- M. Grigoletto, F. Pauli, L. Ventura, *Modello lineare, teoria e applicazioni con R*. Giappichelli, 2017
- J. Fox. *Applied regression analysis and generalized linear models*, third edition. Sage.
- Piccolo, D. (2010), *Statistica*, Terza edizione, Il Mulino.

### Second part: Exploratory Analysis (6 CFU) - Lecture notes from the instructor

- Johnson, Wichern (2014) *Applied Multivariate Statistical Analysis* (6th Edition), Pearson Prentice Hall
- Everitt, Hothorn (2011) *An Introduction to Applied Multivariate Analysis with R*, Springer

## Semester

The course is scheduled in the first semester and in the second part of the second semester.

## Teaching language

Italian

## Sustainable Development Goals

QUALITY EDUCATION
