## COURSE SYLLABUS

### Economic Statistics I

2324-1-E4101B008

---

#### Learning objectives

The Economic Statistics course presents the main methods and tools for the statistical representation of the economic system. Concepts will be introduced, starting with those of value added, GDP, inflation (deflation and disinflation) and others necessary for understanding the economy.

Tools on index numbers or concentration indexes will also be presented that are useful for this understanding.

The course will also be an opportunity to show some misinterpretations of economic statistics that may be present in the public debate.

#### Contents

1. Economic Statistics and National Accounts
2. Economic circuit and intersectorial transactions
3. Index numbers and Consumer price indexes
4. distribution and Inequality measures
