COURSE SYLLABUS

Patient Management

2324-1-I0303D005-I0303D019M

Aims

The student should be able to know and apply the fundamentals of personal care and management during investigations or treatments in the field of Diagnostic Imaging and/or Radiotherapy.

Contents

Aim of the teaching is to provide information about correct patient management during radiological investigations or treatments.

Detailed program

The concept of privacy focus on healthcare and data management

The prevention of healthcare-associated infections (ICAs) focus on universal precautions to be used during investigations or treatments in the radiological field.

Assistance and management of the person during investigation or treatment in radiology.

- The helping relationship and communication with the assisted person: general principles. Reflections on communication with the aggressive person
- The mobilisation and the postures to be assumed by the person during investigations or treatments in the radiological field.
- The prevention of falls while performing investigations or treatments in radiology.
- The recognition and detection of certain vital parameters (consciousness, respiratory activity, circulatory

activity).

- The measures to be used with the person in particular clinical situations (e.g. state of unconsciousness, presence of paresis or plegia, etc.)
- The precautions to be used with the person presenting medical devices (e.g. infusion therapy, oxygen therapy, permanent bladder catheter, vascular accesses, etc.),

Prerequisites

Defined by teaching regulations

Teaching form

Lectures, practical exercises in the simulation room

Textbook and teaching resource

The Teacher will provide educational materials

Semester

Second semester

Assessment method

Office hours

By appointment required by mail
