DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Infermieristica della Disabilità

2324-3-I0101D016-I0101D051M

Aims

- Know the main characteristics of aging and the management of problems related to the chronicity of the elderly person
- Contextualize the concept of frailty and disability in the elderly and the importance of multidimensional assessment (VMD) through knowledge of the main assessment scales
- Identify the main manifestations, data, signs and symptoms of the frail and disabled person
- Identify the main nursing diagnoses, outcomes and nursing interventions within the intra-hospital and community care pathway.
- Identify key nursing diagnoses, outcomes and interventions for people with musculoskeletal disorders.

Contents

The course aims to provide the student with the knowledge and methods necessary to identify and respond to the nursing care needs of the elderly person, using the care process and the tools of multidimensional assessment, contextualizing them to care situations in the geriatric field, orthopedic and rehabilitation, in every care setting.

Specifically, the synthetic contents aim to:

- Describe the clinical picture of the main geriatric pathologies and syndromes related to the elderly that can affect the body by altering its balance and indicate the therapeutic approach

- Knowing how to recognize the pathophysiological mechanisms that determine them
- Know the manifestation of the pathologies treated, signs and symptoms as they are recognizable as the main variables influencing nursing care

Detailed program

The frail elderly: overview and reflection through the cornerstones of geriatrics and hints of the Chronic Care Model.
The multidimensional assessment of the frail elderly: methods and tools.

Hints of self care in the elderly with chronic pathology.

Management of cognitive impairment and delirium in the various manifestations.

Problems related to the alteration of processes related to nutrition and hydration, urinary and intestinal problems and problems of the oral cavity.

In-depth study of therapeutic education and management of therapy in the elderly and caregivers, pain management and infectious risks.

The management of falls, fractures or damage to the musculoskeletal system in the elderly, immobilisation syndrome, and problems related to sarcopenia.

Prerequisites

No

Teaching form

Lectures, narratives, discussions of clinical cases and group work.

Textbook and teaching resource

Semester

3rd year, 1st semester

Assessment method

DISABILITY NURSING

Nursing written test: 14 closed-ended multiple choice tests of which only one is correct and four open questions relating to a brief clinical case of assistance relating to topics covered in the classroom.

To pass the module it is necessary to answer in a congruent and exhaustive way to the open questions evaluated with a score from 0 to 4 for each single question (cut-off 8 for passing open questions) and 1 point for each correct answer to closed-ended questions (cut-off -off 9): Passing the Nursing module 17 total points.
