

# UNIVERSITÀ DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

## Fisica Medica

2324-1-I0101D004-I0101D013M

#### **Aims**

The general aims of the course are to provide students with basic knowledge of Physics, and Physics of radiation, necessary to carry on their profession.

#### **Contents**

The course aims to provide the basic principles of biophysics and medical physics needed to understand the biophysical mechanisms underlying the more relevant physiological processes.

### **Detailed program**

Physical quantities. Conversions between physical quantities. Unit of measurement and changes of the unit of measurement. Vector and scalar quantities. Operations with vectors and vector properties. Concept of force, moment of a force. Equilibrium of a rigid body, examples of the equilibrium of the human body. The levers and their application: lever gain. Elements of statics of rigid bodies. Statics and dynamics of fluids: ideal fluids and real fluids; Archimedes, Stevin, Bernoulli, Poiseuille laws; Reynolds number and turbulence; applications of fluid dynamics to cardiovascular system. The structure of the atomic nucleus: radioactive decay (alpha radiation, beta +, beta -, gamma); law of radioactive decay; radioactivity (Becquerel, Curie); X-ray and production of X-rays; Law absorption of X-rays; elements of dosimetry.

## **Prerequisites**

Basic knowledge of Mathematics.
Teaching form
Frontal lectures and blended learning.
Textbook and teaching resource
Scannicchio D. Giroletti E. (2015) Elementi di Fisica Biomedica, Edises, Milano.
Semester
1st Year, 2nd Semester
Assessment method
Written exam: test with multiple choice and open ended questions. In the Covid-19 emergency period, the exams will be carried out electronically through the platforms made available by the University. In this case, the test may
