COURSE SYLLABUS

Elements of Periodontology

2324-2-I0301D031-I0301D035M

Aims

The aim of the course is to provide basic knowledge on the anatomy of the periodontium and the management of its pathologies

Contents

- Anatomy of the periodontium
- Specific pathologies of the periodontium
- Management of first, second and third level periodontal prevention

Detailed program

- Macroscopic anatomy of the periodontium, clinical aspect of the healthy periodontium
- Microscopic anatomy, histological analysis of the tissues that make up the periodontium
- Plaque-dependent pathologies of the periodontium
- Pathologies of the periodontium not related to bacterial plaque
- Management of the periodontal patient in the three phases of prevention, primary, secondary and tertiary

Prerequisites

Basic knowledge of anatomical and histological structures

Teaching form

Frontal lessons with Slide

Textbook and teaching resource

Slide and Textbook Lindhe

Semester

First semester

Assessment method

oral

Office hours

on appointment
