

UNIVERSITÀ  
DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### Microbiologia

2324-2-I0301D007-I0301D026M

---

#### Aims

Explanation of the fundamentals of microbial genetic code, gene expression adjustments and nature of mutations and gene recombination.

Description of the host-microbe relationships and the mechanisms of microbial pathogenicity.

Description of the atypical mechanisms of inheritance

Description of the diseases due to imprinting defects or to dynamic mutations, and mitochondrial and multifactorial diseases

#### Contents

By the end of the course, the students will have acquired the general concepts about morpho-functional, metabolic, genetic features of microorganisms and about host-microorganism relationship

#### Detailed program

THE BACTERIAL CELL:

Features, morphology and structures. Morphology: size, shape, and grouping. Gram stain and Ziehl-Neelsen (microscopy examination and coloring). The cytoplasm. The bacterial ribosomes. Cytoplasmic membrane. The cell wall. The capsule. The flagella. The fimbriae. Mode of bacterial growth. The production and spore germination. Bacterial Classification.

## **BACTERIAL GENETICS:**

The bacterial chromosome. Plasmids. Insertion sequences, transposable elements and reversible. Expression of the bacterial genome. Mutations. Intercellular transfer and recombination of the genetic material. Transformation. Transduction. Lysogenic conversion. Bacterial conjugation.

## **BACTERIAL METABOLISM:**

Characteristics of bacterial metabolism. Biochemical tests commonly used for the identification of bacteria.

## **BACTERIA-HOST RELATIONSHIPS:**

Colonization. Bacterial adhesion and penetration in host tissues. Toxigenic bacteria. Main features and mechanism of action of exotoxin and endotoxin. Bacterial Biofilm.

## **VIRUSES:**

General characteristics, morphology, structures, replication and pathogenesis. Some examples.

## **FUNGI:**

Fungal general characteristics (morphology, structures, replication and pathogenesis). Some examples.

Disinfection and sterilization. Mechanisms of action of antibacterial drugs

## **Prerequisites**

Basic knowledges dealing with biology, genetic and biochemistry

## **Teaching form**

Lessons

## **Textbook and teaching resource**

MICROBIOLOGIA E MICROBIOLOGIA CLINICA (per i Corsi di Laurea in Professioni sanitarie) ed. PICCIN - ES Tobias; M Connor; M Ferguson-Smith

## **Semester**

First semester

**Assessment method**

Written "in itinere" test (multiple choice test) to evaluate global knowledges about course program

**Office hours**

By appointment required by mail

**Sustainable Development Goals**

GOOD HEALTH AND WELL-BEING

---
