

UNIVERSITÀ
DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Geobiologia

2324-1-F7401Q046

Aims

To provide the main concepts for understanding the interactions and the coevolution of biosphere, hydrosphere and geosphere.

To acquire the conceptual and operative knowledge for the study and interpretation of the modern marine environments and their reconstruction in the geological record, including the recent past.

Contents

Coevolution of geosphere and biosphere, principles of biomineralization, biogenic carbonates, bioconstruction and habitat engineers, sediments and benthos, benthic zonation, introductory biogeochemistry and proxy data in natural archives, past and ongoing global changes

Detailed program

Lessons: The benthos in the geologic history. Extinctions and major events in the Earth history. The appearance of organic calcification and the biomineralization. Photosynthesis and chemosynthesis. Ocean chemistry and biomineralization. The evolution of biogenic builders in the Phanerozoic. The modern bioconstruction: structures, biological associations, ecological factors of control and distribution. Habitat engineers. Diagnosis, significance and distribution of the major benthic associations and related sediments. Benthic zonation in the present-day oceans as key to understand the geological record. The benthos in the geomorphology and evolution of carbonate platforms. Biocoenoses, communities, associations and interpretation of fossil assemblages on the basis of the biostratigraphic processes. The chemical environment at the water-sediment interface. Identification and interpretation of the most important ichnofacies. Biogeochemical proxies and natural archives. The ongoing global change and the

geobiological feed-back.

Laboratory. Geobiological analyses of carbonate sediments and fossil-bearing material and their interpretation.

Prerequisites

Fundamentals of Marine Biology, Ecology and Physical geography. Physical geography and Invertebrate paleontology. The students with a Bachelor degree in Earth Sciences are expected to have a basic knowledge of Physical Geography and General and Invertebrate Palaeontology

Teaching form

Lessons: 5 credits

Tutorials: 2 credit

Textbook and teaching resource

The lectures and some suggested readings will be provided by the teacher.

Useful books: Fundamentals of Geobiology, Knoll et al (Eds) ISBN 978-1-4051-8752-7

Semester

First semester

Assessment method

Written+Oral examination

Written test of 20 questions. Exclusively for the students of Geological Sciences who select this course, there is an additional preliminary question aimed at assessing their knowledge of the main subdivision of the geological time. A negative result for this first question corresponds to immediate rejection.

The final mark is composed by the written+oral marks plus up to 1 point for the practicals.

Marks are given as n/30. Minimum positive value is 18/30

Office hours
