

## COURSE SYLLABUS

### Organizational Change

2324-2-F8802N021

---

#### Learning objectives

The course explores the problem of organizational change in complex, technologically dense environments and characterized by uncertainty, through case analysis, research materials and original in depth studies. The development of skills to analyze and discuss literature, data and cases is a specific educational objective of the course, as is the development of new knowledge about organizational change. Students are required to be both independent and have a critical approach in dealing with the issues being studied.

#### *Knowledge and understanding:*

At the end of the course, students will have acquired knowledge and skills concerning the following:

- organizational analysis, including in-depth study, case analysis and practical application of theory;
- use of the main methodological and theoretical tools to analyze organizational problems through in-depth studies and discussion of cases;
- analysis of how organizations foster, manage and respond to change, especially through the adoption and use of advanced technologies;
- finding, understanding, using and critically reasoning on the reference organizational literature;
- understanding the change of organizations and institutions, particularly in technologically dense environments.

#### Contents

The main topic of the course is the study of organizational change processes with particular reference to the management of uncertainty in relation to digital transformation processes. It will look at the adoption of innovative technologies as an opportunity for learning and change in organizations by adopting an analytical and non-prescriptive perspective which therefore looks at technology in its instrumental dimension of the process of regulation of the organizational action and the decisions that are connected to it.

The course is structured as an 'in progress' investigation on topics such as: organizational change in complex environments, resistance to change, inertia and uncertainty, the relationship between organizational change and the adoption and use of advanced digital technologies (e.g. robotics, industrial internet, etc. ) in complex environments (e.g. healthcare organizations, advanced smart manufacturing).

## **Detailed program**

The course aims at providing students with tools and concepts for the in-depth and critical analysis of organizational change processes in complex environments. In the first part of the course, the theoretical foundations about the organizational change's topic are laid for then addressing the relationship between organization, environment and complexity, by deepening the issues of the resistance to change and the organizational inertia. Then some conceptual frameworks for the analysis of digital transformation and its organizational implications will be provided. In particular, the course will look at technology and its role for organizational change by first unpacking the very concept of technology starting from some of its classic and contemporary definitions and typologies and second by delving into how complex organizations adopt advanced technologies to deal with change.

## **Prerequisites**

Sufficient notions of logics and general culture.

## **Teaching methods**

Lectures, case analysis, in depth studied, prepared and discussed during the course.

## **Assessment methods**

Students will be assessed through (1) an individual written test based on "open questions" regarding the texts and the reading package (collection of articles and books) provided during the course, (2) a project work aimed at deepening some central themes of the course.

More precisely, the evaluation criteria for the written test are:

1. property of language - appropriate use of terms and concepts;
2. accuracy in the logical exposition of the arguments;
3. ability to connect different topics;
4. completeness of the presentation, given the time (test duration) and space (pages available) limits.

## **Textbooks and Reading Materials**

The bibliographic tentative list could be:

Catino M. (2014), *Organizational Myopia: Problems of Rationality and Foresight in Organizations*, Cambridge: Cambridge University Press (Paperback edition).

Plesner, U., Husted, E. (2022) 'L'organizzazione digitale', Il Mulino, Bologna

Further materials and readings provided during the course by the teacher [reading package]

## **Sustainable Development Goals**

QUALITY EDUCATION | DECENT WORK AND ECONOMIC GROWTH | INDUSTRY, INNOVATION AND INFRASTRUCTURE | RESPONSIBLE CONSUMPTION AND PRODUCTION
