Global Management Decisions

2324-2-F5602M020

Learning objectives

This course deals with the management of business organizations which compete in international markets and spread both primary and auxiliary activities of their value chain throughout several locations around the world. The course is meant to develop skills and abilities that help understand the evolving nature of managing an international business, identify the main drivers of globalizations, and evaluate how the process of globalization creates opportunities and challenges for management practices. To accomplish these tasks, it is necessary to analyze how the political (i.e., government policy), economic (i.e., the pursuit of innovation and entrepreneurial activities), and legal (i.e., the protection of intellectual capital) systems shape the attractiveness of different countries and regions. At Alongside, it is crucial to examine how ethical, corporate social responsibility, and sustainability issues faced by international businesses affect management practices. More specifically, students will learn how to: (a) identify and choose the different strategies for competing in global market place; (b) evaluate how the organizational architecture must opportunely match to global strategy in order to improve performance; (c) compare and select the most effective modes to enter foreign markets; (d) assess how country differences, production technology, and production factor affect the choice of where to locate production activities; (e) exploit the potential of business analytics and international market research; (f) configure the marketing mix globally.

Contents

1. Globalization
2. National differences in political, economic, and legal systems
3. Ethical, corporate social responsibility, and sustainability
4. Foreign direct investment
5. The strategy of international business
6. The organization of international business
