

UNIVERSITÀ
DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Fisica dello Stato Solido

2324-1-F1701Q097

Aims

Introduction of fundamental concepts in Solid State Physics

Contents

Structural, electronic and vibrational properties of solids

Detailed program

1. Crystal lattices and reciprocal lattices,
2. Band structure in solids,
3. Semiclassical electron dynamics,
4. Classical and Quantum harmonic crystal,
5. Optical and Transport properties of Solids
6. Superconductors
7. Heterostructures, quantum nanostructures

Prerequisites

Classical mechanics and electromagnetism, basic quantum mechanics

Teaching form

Frontal lectures and exercise sessions using blackboard and/or slides.

Textbook and teaching resource

- N.W. Ashcroft & N.D. Mermin, "Solid State Physics"
- Harald Ibach & Hans Lüth, "Solid-State Physics: An Introduction to Principles of Materials Science"
- G. Grosso & G. Pastori Parravicini "Solid State Physics"

Copies of the slides used during lectures

Semester

I Semester

Assessment method

Students' knowledge will be evaluated through an oral exam focusing on the topics discussed during the course.

Office hours

at the end of the lessons or by appointment

Sustainable Development Goals

INDUSTRY, INNOVATION AND INFRASTRUCTURE
