

UNIVERSITÀ  
DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### Relatività Generale

2324-1-F1701Q084

---

#### Aims

General relativity and applications.

#### Contents

1. Principles and equations of general relativity.
2. Elements of differential geometry.
3. Black hole physics.
4. Elements of cosmology.

#### Detailed program

1. Summary of special relativity. Minkowski spacetime.
2. Equivalence principle. Accelerated observers.
3. Elements of differential geometry. Curvature. Geodesics.
4. Physics on curved spaces. Curvature and gravity. Einstein's equations. Rudiments of Hamiltonian treatment. Vielbein formalism.

5. Gravitational waves. Black holes: Schwarzschild, charged, rotating solutions. Definition of mass in general relativity. Causality.

6. Elements of cosmology. De Sitter and anti-de Sitter spaces.

## **Prerequisites**

Undergraduate degree in physics.

## **Teaching form**

Lessons in English, 6 credits.

## **Textbook and teaching resource**

Lecture notes available at <https://www.dropbox.com/s/t84lftb2llgb87w/GR.pdf?dl=0P>

## **Semester**

First semester

## **Assessment method**

Written and oral exam, of equal weight in the final evaluation, not necessarily in the same call.

Written exam: ten exercises, three hours. Object of evaluation will be the logic used in the resolution of the problems.

Oral exam: open questions on the course's topics, unrelated to the written exam. Object of evaluation will be the candidate's knowledge of the theoretical part of the program.

## **Office hours**

By appointment
