COURSE SYLLABUS

Developmental Change and Promotion of Psychological Growth

2324-1-F5107P002

Learning area

Psychological functioning: models and methods for assessment

Learning objectives

Knowledge and understanding

- Awareness, knowledge and understanding of the relevance of developmental processes.
- Proactive support to child development as crucial for the prevention of psychological and social distress.
- Promotion of the development of the child's cognitive and socio-affective skills and support for the contexts in which this development takes place.
- Interactions between mind and body during development.
- The development of the ability to mentalize and Theory of Mind.

Applying knowledge and understanding

- Identification of the key factors for promoting development.
- Development as the foundation of individual well-being.
- Good practices for enhancing learning processes in early childhood, preschool and school age.
- Play as a promoter of development and as a method of intervention.
- The effects of persistent anxiety and fear on mental development.
- Poverty and individual development.
- Adverse caregiving experiences and individual development.
- Ability to apply knowledge of the principles that guide development to the understanding of atypical and/or at risk developmental conditions (neurodevelopmental syndromes, preterm birth).
- The link between early environment and emotional well-being.
- Ability to identify early indicators of typical and atypical development

Contents

Support for child development is of fundamental importance for the prevention of psychological and social distress. Prevention and support to human development therefore represent a fundamental objective for the clinical psychologist, who may operate not only within a perspective of intervention and rehabilitation, but also by acting proactively to promote the development of the child's cognitive and socio-affective skills and to support the contexts in which such development takes place. The course aims to offer students awareness, knowledge and understanding of the relevance of development processes for the individual wellbeing.

Detailed program

- Development of the human mind.
- Factors promoting human development.
- Sensitive periods and the relevance of early experiences.
- Early implicit learning processes and development of complex cognitive and socio-affective skills.
- Effects of adverse experiences on the development of the child.
- Cognitive, metacognitive and affective-motivational aspects in preschool and school age learning.
- Play activity as a means of promoting cognitive, emotional, affective and social development and as an intervention tool in ecological contexts.
- Development of the ability to mentalize and Theory of Mind.
- Interactions between early skills, environment and developmental outcomes in atypical or risky developmental trajectories (neurodevelopmental syndromes, preterm birth, exposure to adverse experiences).
- Early indicators of typical and atypical development in different areas of psychological functioning and programs aimed at supporting development in vulnerable conditions.

Prerequisites

Knowledge of classical theories of psychological development.

Teaching methods

In addition to frontal lectures, the course will offer guided discussions, video presentations. Slides and scientific papers are made available to all students (even those who are not attending classes) through the e-learning website.

Assessment methods

The exam is written with oral interview upon request. The written exam includes multiple choice questions and open questions. Multiple choice questions provide extensive evaluation of knowledge acquisition; open questions evaluate students' critical thinking on such knowledge.

Students may ask to attend an oral interview, in addition to the written exam, on all the topics included in the Syllabus.

Evaluation criteria are as follows: response accuracy for multiple choice questions, adequacy of contents, formal organization and terminology for the answers to open questions.

Although this course is held in Italian, for Erasmus students, course material can also be available in English, and students can take the exam in English if they wish to do so

Textbooks and Reading Materials

Detailed information regarding the didactical material will be published on the e-learning page associated with the course

Sustainable Development Goals

GOOD HEALTH AND WELL-BEING
