SYLLABUS DEL CORSO

Coral Reef Rehabilitation Techniques

2324-1-128R-CRR

Title

Tecniche di ripristino delle scogliere coralline

Teacher(s)

Simone Montano

Language

italiano/inglese

Short description

This 8 hours theoretical program will provide insights on what is involved in coral reef restoration using the coral reef gardening concept. The course touches on current best practices, appropriate design, logistics and evaluation of a restoration project.

By participating the attendees will acquire skills both in protection and conservation of tropical marine environments (with particular reference to the Coral Restoration: planning, construction and maintenance of suitable coral nursery facilities for physical reconstruction of parts of coral reefs) and theoretical skills (knowledge) related to biology and ecology of coral reefs, aimed at a thorough understanding of their health conditions.

CFU / Hours

1 CFU/8 ore

Teaching period

July 2024
