DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### Fundamentals of Biostatistics

2324-117R005

---

#### Aims

The course will introduce the fundamentals of biostatistics, with a particular focus on life sciences applications. The main tools of descriptive and inferential statistics will be explained to guide the student through the typical process at the basis of an experimental study, which starts with the design of the experiment, proceeds with data analysis, and ends with the statistical interpretation and the critical analysis of the relevance of the obtained results.

#### *Knowledge and understanding.*

The student will gain knowledge about the choice of the proper sampling and statistical methods, and the interpretation of outcomes after data analysis.

#### *Applying knowledge and understanding.*

The student will be able to apply the acquired knowledge for the solution of statistical problems, in addition to organizing and handling biological data in automatic ways (practical skills on the use of spreadsheets).

#### *Making judgements.*

The student will be able to process the acquired knowledge and choose the proper statistical methods for different applications.

#### *Communication skills.*

Use of an appropriate scientific vocabulary and ability in oral/written reports

#### *Learning skills.*

Skills in literature reading and understanding, as well as in the application of the acquired knowledge for data analysis in research contexts.

#### Contents

Descriptive statistics.  
Inferential statistics.

## **Detailed program**

- Descriptive statistics. Introduction to statistics (types of data, collecting sample data). Summarizing and graphing data (frequency distributions, histograms, boxplots). Statistics for describing, exploring and comparing data (measures of center, measures of variation, measures of relative standing).
- Basic concepts of probability. Probability distributions. Sampling distributions.
- Inferential statistics. Estimation methods, confidence intervals. Hypothesis testing. Two sample hypothesis testing. Non-parametric methods. Multi-sample inference (ANOVA). Correlation and regression.

## **Prerequisites**

Basic knowledge of spreadsheets.

## **Teaching form**

16 hours of lectures and hands-on sessions.

## **Textbook and teaching resource**

All the educational material will be available on Moodle platform.

Textbooks:

- M.F. Triola, Essentials of statistics, Pearson, 2014
- B. Rosner, Fundamentals of biostatistics, Brooks/Cole, 2011

## **Semester**

5-6-7 February 2025

## **Assessment method**

Written exam (60 minutes), consisting in 12 multiple-choice questions.

## Office hours

On demand by e-mail.

## Sustainable Development Goals

GOOD HEALTH AND WELL-BEING | QUALITY EDUCATION | INDUSTRY, INNOVATION AND  
INFRASTRUCTURE
