

SYLLABUS DEL CORSO

Psicologia Dinamica dei Gruppi e delle Organizzazioni

2425-1-F5106P032

Learning area

2: Social psychology, economic psychology and decision-making

Learning objectives

Knowledge and understanding

Promote knowledge of the following topics:

- The group according to the psychodynamic and social perspective.
- Group and organisation dynamics according to the psychodynamic perspective.
- Organisational, relational and individual difficulties in organisation.
- Organisational change and resistance.
- The psychologist's role in organizational contexts and working with groups.

Ability to apply knowledge and understanding.

Promote the ability to apply the knowledge described above through the application of the following practices:

- Evaluation of the dynamics of groups and organisations according to a psychodynamic perspective.
- Assessment of organisational and individual difficulties in organisations.
- Recognize resistance to change.
- Leading groups.
- Planning of psychodynamic and systemic intervention paths in the organisations.

Contents

The course aims to promote the development of knowledge relating to the dynamics of groups and organisations according to the psychodynamic perspective. In addition, the student will acquire theoretical knowledge on individual difficulties in organisation, and on the most common organisational dysfunctions, as well as skills relating to evaluation and intervention group practices of the dynamics and difficulties studied.

Detailed program

- Psychodynamic and psychosociological theoretical models on the group, with a focus on Bion and Quaglino theories.
- Needs, fantasies, relationships and motivations in groups.
- Group dynamics analysis methodologies: the four-dimensional model of Quaglino.
- Organisational dysfunction from a psychodynamic perspective (organisational neurosis, dysfunctional organisational cultures, dysfunctional relationships, transfert relationships).
- Emotions, relationships, and defence mechanisms in organisations.
- Individual problems in organisations, with particular focus on work-related psychopathologies and psychosocial problems.
- Defence mechanisms, resistance and change.
- Working with groups in organisations: methodologies, challenges, skills, resources.
- Leading groups.
- Design of group interventions in organisations: promoting change and reducing organisational, relational and individual dysfunctions.

Prerequisites

It is assumed that students have basic knowledge of dynamic psychology, social psychology of groups and work psychology. Students who have not taken these exams are invited to report any lacks to the professor (via e-mail), to agree on a basic reference bibliography.

Teaching methods

Lectures, discussions, films, group work, case studies, scientific articles. Approximately 20% of the course will be delivered with interactive teaching.

The type of teaching activity will be lessons, as defined in the teaching plan of the Course of Studies. The lessons will be in person.

All material is made available on the course e-learning site.

Teaching will take place in Italian language.

Assessment methods

The examination will be carried out through a written test aimed at assessing the specific knowledge of the main theoretical aspects covered during the course, together with the argumentative and critical ability of the student.

The final test will consist of open questions and multiple-choice questions. During the course, group work will be carried out which will allow the student to obtain extra scores which can be added to the result achieved in the final individual exam.

Although this course is held in Italian, for Erasmus students, course material can also be available in English, and students can take the exam in English if they wish to do so.
