DEGLI STUDI DI MILANO-BICOCCA

## COURSE SYLLABUS

### Training in Diagnostic Imaging and Radiotherapy

2425-3-I0303D016-I0303D078M

---

#### Aims

NUCLEAR MEDICINE: the equipment: the Gamma Camera, Single Photon Emission Scintigraphy (SPECT), Positron Emission Tomography (PET). The preparation of radiopharmaceuticals.

Reception and positioning of the patient; the execution of scintigraphic examinations and PET and PET/CT investigations.

RADIOTHERAPY: the equipment: the Simulator, the CT, the linear accelerator. Patient reception; patient positioning and immobilization methods; the setting of the radiotherapy treatment; the execution of the treatment.

HEALTH PHYSICS: Quality controls on equipment, radiation protection of patients and operators.

RADIODIAGNOSTICS: diagnostic techniques of conventional planar, contrastographic and dedicated radiology, CT, Magnetic Resonance Imaging

#### Contents

By the end of the third year of training, the students will be able to conduct Nuclear Medicine diagnostic investigations and Radiotherapy treatments, knowing the functioning of equipment and the procedures for processing and archiving images.

The students will also be able to respect and apply the standards of radioprotection for patients and workers.

They will know conventional, dedicated, contrastographic radiological techniques and CT and MRI diagnostic techniques.

#### Detailed program

## **Prerequisites**

## **Teaching form**

Traineeship

## **Textbook and teaching resource**

## **Semester**

Second semester

## **Assessment method**

Oral examination

## **Office hours**

By appointment required by mail

## **Sustainable Development Goals**

GOOD HEALTH AND WELL-BEING | QUALITY EDUCATION
