COURSE SYLLABUS

Radiobiology

2425-1-I0302D004-I0302D016M

Aims

The student should be able to know and describe the Radiobiologic effects at atomic, molecular, biomolecular, cytologic and hystologic levels.

Contents

Aim of the teaching is to give students the knowledge about the biological effects of ionizing radiation.

Detailed program

Radiobiologic effects at atomic, molecular, biomolecular, cytologic and hystologic levels. Water irradiation and oxygen enhancement effect. Low and high LET radiation. Relative biological effect. Radiation of homogeneous and inhomogeneous cells and related survival. Repair and recovery of radiation damage. Short and long term effects on tissues and organs. Somatic and genetic effects. Stochastic an graduate effects. Radiation cancerogenesis.

Prerequisites

Teaching form

Lectures

Textbook and teaching resource

The Teacher will provide educational material

Semester

Second semester

Assessment method

Multiple choice test comprising 10 questions with only one correct answer among 4 aimed at evaluating global comprehension of course program.

Office hours

By appointment required by mail
