SYLLABUS DEL CORSO

Elementi di Parodontologia

2425-3-I0301D033-I0301D052M

Aims

The aim of the course is to develop the knowledge of non-surgical and surgical periodontal therapies in order to develop in the student a critical impulse on the different conditions of the patients that may be presented to him during the future clinical activity in order to subsequently be able to pursue the best therapeutic path.

Contents

the course will present a careful evaluation of the best literature present, an exposition of all the techniques known to date with the evaluation of the pros and cons and the knowledge of all the available materials.

Detailed program

How to evaluate the best scientific evidence (EBD)

The therapeutic choice

The new classification of periodontal disease: what has changed and why (focus on smoking and diabetes)

Non-surgical therapy (therapeutic advantages and limitations)

Periodontal surgical therapy: biological basis and periodontal anatomy

The use of stem cells in periodontology

Regenerative therapy: definition and biological basis

Surgical techniques: biomaterials, membranes

Anatomy of the interdental papilla

Periodontal flaps from the 19th century to today

Growth factors in periodontology

Mucogingival surgery: techniques and bilaminar prelovo from the palate

Periodontal disease and systemic diseases (cardiovascular disease, diabetes, obesity, premature birth)
Perimplantite

Prerequisites

Knowledge of periodontal microbiology, anatomy and classifications of intrabony defects, recessions and furcation lesions (second year periodontology)

Teaching form

Frontal lessons

Textbook and teaching resource

PDF of the PPT of the lessons

Recommended textbooks:

Clinical periodontology and oral implantology - Lindhe - EdErmes

Soft tissue regeneration in implantology - Leonida - EdErmes

Stem cells and gene therapy for dentists - Leonida - Ed Martina

Semester

I semester

Assessment method

oral exam

Office hours

Before or after class by appointment via email
