UNIVERSITÀ
DEGLI STUDI DI MILANO-BICOCCA

SYLLABUS DEL CORSO

Odontoiatria Preventiva e delle Comunità

2425-2-I0301D032-I0301D046M

Aims

The learner will be able to know the principles of preventive and community dentistry, as well as learn the procedures for reading and studying texts and articles in the sector.

Contents

Community dentistry is defined as the science, the art of preventing dental disease, promoting oral health and improving the quality of life through appropriate models within society. The teaching is not limited to dealing with mouth diseases only from a strictly preventive point of view, but with a sociological, economic-health, etc. multidisciplinary vision.
Thanks to this knowledge, the student will be able to have a different approach to oral diseases, in which the therapeutic-technological aspect will be replaced by a social perspective of the diseases themselves, oriented towards the community without neglecting the needs, desires and expectations of individuals.

Detailed program

Primary, secondary, tertiary prevention in dentistry
General principles of caries prevention
Primary prevention of caries. Fluoroprophylaxis-Sealing
Stomatomucopathies: Epidemiology-Etiology-Risk factors
Dysgnathia: Epidemiology-Etiology-Risk factors
