SYLLABUS DEL CORSO

Salvaguardia del Patrimonio Vascolare e Gestione degli Accessi Venosi

2425-2-I0101D919

Aims

The course aims to deepen the knowledge related to the indications to the positioning and the subsequent management of vascular access in the short, medium and long term, with a view to multidisciplinary management aimed at improving not only the delivery of care but also the quality of life.

Contents

The course aims to deepen the knowledge related to the indications to the positioning and the subsequent management of vascular access in the short, medium and long term, with a view to multidisciplinary management aimed at improving not only the delivery of care but also the quality of life.

The increase of the average age and the situations of chronicity that more and more often must be managed in the persons requesting intra and extra-hospital assistance, requires a proactive approach aimed at safeguarding the venous heritage. The technological evolution and the new methods of implantation of intravascular devices have, in recent years, changed the possibilities of intervention in favor of greater tolerability on the part of the person and less aggression towards the venous heritage.

Detailed program

Advanced venous accesses for intrahospital and extra hospital use: the new panorama and new responsibilities for the Nurse.

The proactive approach to intravenous therapy needs.

Knowledge of criteria and assessment scales of the venous heritage

The ordinary management of vascular access in the short, medium and long term.
Monitoring and surveillance of complications: MARS (Medical Adhesive Related Skin Injuries), occlusion, infection, venous thrombosis safeguarding venous heritage as a new element of care processes.
Chronicity and the DIVA phenomenon (Difficult Intra Venous Access).

Central and peripheral venous accesses: indications and areas of use (Short peripheral agocannula; long peripheral cannula; Midline; Picc (peripherally central inserted catheter); CICC (Centrally Inserted Central Catheter) not tunneled; CICC tunnellized; FICC (Femorally Inserted Central Catheter) not tunneled; tunneled FICC).

The DAV Expert as an aid in catheter selection.

The principles of positioning advanced vascular accesses.

Catheter stabilization and protection (transparent polyurethane dressings and breathability index meaning; sutureless devices, subcutaneous anchorage system, cyanoacrylate glue)

The tunneling of catheters and the importance of exit site.

Port protectors: a new strategy for infection control.

The related catheter complications

Definition and diagnosis of CLABSI (Central Line Association Blood Stream Infection) and CRBSI (Catheter Related Blood Stream Infection) and role of the Nurse in the diagnostic process.

Prevention of catheter related infections.

Deep vein thrombosis and fibroblastic sheath: differences, prevention and early identification.

Catheter occlusion: prevention and solutions.

Prerequisites

Enrolment in the 2nd and 3rd year of the nursing degree course

Teaching form

The lesson takes place in the dispensing mode in presence through front lesson and Skill station on management and dressing procedures
