COURSE SYLLABUS

Surgical Wounds: Assessment and Treatment

2425-2-I0101D910

Aims

The course aims to provide the necessary knowledge to:

- know the principles of healing of surgical wounds and chronic skin ulcers;
- make a proper assessment of surgical wound and chronic skin ulcers;
- distinguish uncomplicated wound and major complications;
- know the advanced dressings with their indications, making use of research on technical innovations, new materials, devices and products for dressings.

Contents

A wound is a continuous solution of one or more tissues of the body and is defined according to the manner in which it is determined and the time of healing. The main types of wounds, classified according to the healing time, are acute wounds and chronic wounds: acute wounds are mainly represented by surgical wounds, while chronic skin ulcers are represented by all skin lesions that do not reach the state of tissue repair within a certain time.

Surgical wounds are a frequent occurrence in clinical practice, and most of them heal without complications. However, we must also consider the problem of chronic skin ulcers, which in many cases delay repair and create the conditions for repeated hospitalization and have a huge impact on the quality of life, the social sphere of patients and the social and health costs.

The extent of complications in healing acute and/or chronic wounds is relevant both to the number of patients involved and to the time and resources needed to treat the problem.

Detailed program

History of acute and chronic injuries, epidemiology and health costs

Definition of surgical wound
Definition and pathophysiology of chronic skin lesions
Healing modalities of surgical wound and chronic ulcers
Evaluation and treatment of uncomplicated surgical wound
Assessment of chronic injuries
Advanced wound dressings and chronic ulcers
Early and late complications of surgical wound
Treatment of surgical wounds and chronic injuries, whether or not infected
Treatment of chronic skin ulcers according to Wound Bed Preparation (WBP)
Clinical cases with small group work

Prerequisites

Enrolling in the 2nd-3rd year of the Bachelor's Degree in Nursing

Teaching form

Face-to-face teaching – frontal lectures and tutorials
