COURSE SYLLABUS

Human Sciences

2425-1-I0101D007

Aims

The course aims to provide students with the theoretical knowledge concerning psychological, social and anthropological elements of nursing profession in order to help them to adequately perceive their professional role in a complex context of networks and relationship, in a historical-anthropological perspective and understand psychological and social mechanisms of human behaviour.

Contents

Topic of the Human Sciences course is to give students an overview of the anthropological, social and psychological aspects of health care professions.

Detailed program

CLINICAL PSYCHOLOGY - Psychology as a science of human behaviour, methodological aspects of psychological research, with specific attention to health care professions; main concepts of general and clinical psychology (structure of the mind, cognitive and dynamic processes, mental disorders, clinical relationship and psychotherapy) and the self-evaluation tools (anxiety, stress, burnout and quality of life tests), the psychological challenges of the nursing profession in relation to emergency services, primary care, intensive care and end-of-life care. The placebo effect in the care relationship and its implications. ANTHROPOLOGY - Medical anthropology, human health and disease; social processes and cultural representations of health, illness and related nursing/care practices; Disease, Illness and Sickness; narrative medicine: general principles; popular medicine and health anthropology in the developing countries. SOCIOLOGY - The course is an introduction to sociology: basic concepts and who is the 'sociologist'; social research – basic tools; the concept of culture, values and cultural diversity; social organization, action, and power; interaction, groups, organizations; welfare systems and inequalities;

moreover, specific topics related to sociology of health and medicine will be deepened (social inequalities in terms of health; process of medicalisation of society; professionalisation in health systems; health cultures; social construction of pregnancy; health communication).
