#### Aims

The course aims to teach the basic mechanisms that regulate the molecular organization, the biochemical reactions, the metabolic pathways, and their regulation.

#### Contents

The student will learn 1) the general information on the molecules that make up living matter; 2) the structure, function, mechanism of action of enzymes and their role in metabolic regulation; 3) the mechanism by which the living organism produces energy; 4) nutritional aspects as a source of energy in everyday life and in physical exercise; 5) digestive processes, the molecules involved in energy metabolism.

#### Detailed program

Introduction to the course and general information on living matter. Structural biochemistry: Carbohydrates, Lipids, Proteins, Nucleotides. Biochemical reactions, enzymes, enzymatic kinetics, regulation. Bioenergetics, respiratory chain, oxidative phosphorylation. Principles of digestion and absorption of nutrients. Nutrition and Vitamins. Energy metabolism. Caloric value, caloric equivalent, the fuel of choice in muscular work.
