

SYLLABUS DEL CORSO

Statistica per la Ricerca

2425-3-I0202D130-I0202D059M

Aims

Consolidation of basic knowledge of the main statistical-methodological tools of descriptive statistics and introduction to inferential statistics for study planning and data analysis

The module aims to make the student able to:

- Critically read the scientific literature that presents descriptive and inferential statistical analyzes with confidence intervals
- Have a solid basic knowledge to be involved in the design and implementation of studies

Contents

Confidence interval on the parameter p probability of an event (proportion)

Frequency tables and graphs

Order of magnitude and dispersion indicators

Gaussian Distribution (to approximate the trend of a histogram)

Confidence interval on the μ parameter

Use of the Gaussian distribution to construct confidence intervals

Detailed program

- UNIT A: Confidence interval on the proportion p (Chapter 9)
Calculation of the point estimate of a probability
Confidence interval: calculation of the interval estimate of a probability, interpretation, simulation

Planning the interval estimate of a probability

-----> QUIZ

- UNIT B: Organizing and summarizing data (Chapter 2 and Chapter 3)
Construction of a frequency table for a qualitative characteristic: absolute, relative, relative frequencies %
Graphic representation with bar and pie charts
Construction of a frequency table for a quantitative characteristic: aggregation into classes, absolute, relative, relative % frequencies
Graphic representation with histogram
Synthetic indicators of the order of magnitude and variability of the quantitative phenomenon: arithmetic mean (and/or median) and standard deviation

-----> QUIZ

- UNIT C : Gaussian Distribution and its use as a histogram approximation method (Chapter 7)
Gaussian distribution: genesis and area calculation method

-----> QUIZ

- UNIT D : Confidence interval on μ (Chapter 9)
Confidence interval: calculation of the interval estimate of a μ parameter, interpretation, simulation
Planning the interval estimation of a μ parameter

-----> QUIZ

- UNIT E: Use of the Gaussian distribution to construct the confidence intervals in UNITS A and D
sample distributions of the proportion and the mean

Prerequisites

Basic knowledge of descriptive statistics.

Teaching form

Specified in the syllabus of the course.

Textbook and teaching resource

- Book: Fondamenti di statistica Micheal Sullivan III, traduzione a cura di Emma Zavarrone, Pearson 2020, disponibile anche come e-book https://www.pearson.it/opera/pearson/0-7264-fondamenti_di_statistica
- Slides
- Video Clip

Semester

Specified in the syllabus of the course.

Assessment method

Specified in the syllabus of the course.

Office hours

Specified in the syllabus of the course.

Sustainable Development Goals

QUALITY EDUCATION
