Learning area

Business Management

Learning objectives

The course aims to explore the role of marketing management and its interaction with other business functions; it aims also to examine the competitive dimension of marketing and the effects of globalization on marketing strategy.

The course is composed of two modules: Marketing I (8 cfu) and Marketing Metrics (5 cfu). Marketing I analyzes the main marketing decisions in order to develop a knowledge of marketing both from a theoretical and a practical point of view. Marketing Metrics, on the other hand, intends to develop a knowledge of the main evaluation metrics of marketing strategies.

The exam includes both the modules of Marketing I (8 credits) and Marketing Metrics (5 credits). The final mark will derive from the weighted average of the marks obtained in the two modules themselves (both tests must be passed).

Contents

This course has both theoretical and practical purposes: it introduces the basic theoretical principles of marketing, and provides the tools to manage the exchange between firms and customers. The first part of the course examines the main strategic decisions falling under the marketing domain. The second part of the course examines the implementation of marketing strategies; this section mainly regards product, pricing, distribution, and communication decisions.

The course aims to explore the main marketing metrics and to provide students with a broad and in-depth knowledge of specific indicators useful to measure and evaluate marketing performances. In particular, product, distribution, communication and price metrics will be examined
