SYLLABUS DEL CORSO

Strategie di Politica Industriale e Tutela della Concorrenza - 2

2425-1-F7701M131-F7701M131-1-T2

Learning objectives

The main purpose of the course is to identify the main market structures, the analysis of the strategic behavior of companies on product policies (price discrimination, quality of goods), strategic relationships between companies and business decision analysis models in conditions of uncertainty, the second objective is the historical evolutionary analysis of the Antitrust institutions. It will be responsible for the equalization of economic conflicts: the protection of competition as a consumer protection, the protection of the company that suffers abuse of dominant positions, in other words the weak parts of the market. The third objective is to provide students with an understanding of the fundamental tools of analysis and antitrust intervention for specific competition protection actions. The course will focus on economic analysis tools for defining the relevant product market. The economic analysis tools to define the cases of "abuse of market power" will be subsequently treated. Economic models will be analyzed to define the agreements between firms restricting competition (cartels, agreements, etc.). Finally, the vertical and horizontal integration strategies used and the antitrust constraints to these behaviors will be analyzed.

Contents

The market is a fundamental structure for the functioning of modern western economies. On the contrary, in order to produce desirable results, interactions between subjects need a series of stable and efficient institutional references, a set of rules that ensure the protection of competition from the freedom of competition. Without the support of these rules, the essential property of the market as a specific economic institution is lost, that is, to generate a price system that allocates the economic resources to their purposes in the most efficient way possible.

Detailed program

1 Introduction-Business theory, Monopsony Monopoly Recalls

- 2 Monopoly, monopsony Dominated companies
- 3 Cartels: coordinated behaviors in oligopoly, non-cooperative oligopoly
- 4 Non-cooperative oligopoly, Product differentiation and monopolistic competition
- 5 Location Models, Price Discrimination
- 6 Complex methods for determining the price
- 7 Strategic cooperative and non-cooperative behavior
- 8 vertical integration Vertical Restrictions
- 9 Industrial structure / patents and technological innovation
- 10 Incomplete pricing information
- 11 Incomplete information on qualities
- 12 Ex Ante and Ex Post adjustment
- 13 Protection of competition: history / objectives / regulations
- 14 Market power and social well-being
- 15 The main cases of abusive conduct of competition in the European legal system
- 16 The definition of the relevant market / the assessment of market power
- 17 Collusion and horizontal agreements
- 18 Horizontal castings
- 19 Vertical restrictions

Prerequisites

Introductory courses in microeconomics and business administration

Teaching methods

Frontal lessons.

Assessment methods

Written exam
