

UNIVERSITÀ DEGLI STUDI DI MILANO-BICOCCA

COURSE SYLLABUS

General Psychology I - 1

2425-1-E2401P001-T1

Learning area

Knowledge and skills useful to describe, understand, promote the individual psychological functioning and its change.

Learning objectives

Knowledge and understanding

- The experimental approach to psychology: methods and theory
- Main themes and most relevant theories in the study of individual behavioural and cognitive functioning.

Applying knowledge and understanding

- · Ability to understand the technical language of the field
- Ability to understand the research results in psychology
- · Ability to identify the psychological processes involved in individual behaviour in everyday life
- · Ability to recognize the non-pathological cognitive functioning

Contents

The course introduces students to the most relevant theories and theoretical approaches in the study of general psychology, analyzing in detail some cognitive processes. The intent is to clarify the subjects of interest of general psychology and how general psychology studies the processes and phenomena of interest.

Detailed program

- Experimental approach used by general psychology with particular emphasis on methodological and theoretical aspects.
- Sensory systems
- Problems, methods of investigation and relevant theories of specific cognitive processes:
- Perception
- Attention
- Learning
- Memory
- Emotions

Prerequisites

Receptive and productive language skills Analytical abilities in understanding and reasoning The capacity of synthesis and content processing

Teaching methods

All lessons will be in class.

Different teaching methods will be used:

- 1. Lessons. They will be used to present and explain the contents. They will make up (approximately) the 80% of the course (46 hours) and will be conducted in delivery mode in person.
- 2. Discussions (approximatley the 20% of the course 10 hours). They will be used to: a) answer the questions and scrutinise the most complex topics; b) fill in and comment the results of the questionnairs and possible small assignment; c) discuss together theoretical/methodological issues of particular interest. These will be conducted in interactive mode in presence.

Discussions will be based on the outcomes of the following tools: Short self-evaluation and feedback questionnaires +hot questions. The aim of the questionnaires is twofold: allowing students to self-evaluate and to give a feedback on the most recent topics presented during the lessons. Questionnaires will also include some exercises and assignments, so that students can try to apply to specific cases what they have lernt in the last lessons. The questionnaires will NOT be evaluated. However, students will be able to self-evaluate their learning progresses.

During the same period, studens will have the chance to post questions on topics presented during the latest lessons and to vote the questions posted by collagues. Hot questions will be discussed in class, starting from the most voted ones.

Note Activity at point 2 will be only for students attending the course.

Teacher-to-student and student-to-student communications and discussions will be fostered through a dedicated channel (telegram group)

Assessment methods

Written exam

Four 4 computer-based open questions. Answers should be ~15 lines long. The maximum time for the exam is 45 minutes. Questions may be on both theoretical and empirical/methodological arguments part of the textbooks and reading materials (and independently of wether they have been discussed in class). Each question is evaluated with a scale that goes from 0 (unanswered question, or totally not consequential or patently wrong answer) to 7.5 (well-argued complete and correct answer). The sum of the scorse of the 4 questions gives the final grade of the exam.

For students attending the course (and that have obtained at least 18 in the written exam): Participating to the lessons, as well as filling the questionnaires and posting the hot questions will be evaluated with a score from 0 to 2. Note that this score is summed to the other scores only if the student obtain at least 18 in the written exam.

Textbooks and Reading Materials

Cherubini P., Bricolo E., Reverberi C. (a cura di) (2021). Psicologia generale (nuova edizione). Milano: Raffaello Cortina Editore.

The program is the following: Chapter 1 --> the whole chapter except for 1.3.4.1 and 1.3.4.2 Chapter 2 --> only sections: 2.1, 2.2, 2.6 Chapter 3 --> the whole chapter Chapter 4 --> the whole chapter Chapter 5 --> the whole chapter Chapter 6 --> the whole chapter except for: Figure 6.1, boxes 6.2, 6.5 Chapter 11 --> the whole chapter except for: 11.4.2, 11.4.3, 11.6; for what concerns 11.3.2, consider only the Theory of Appraisal by Scherer (fom p. 463, paragraph annoteted with "teoria dell'appraisal di Scherer" to p. 465, end of first paragraph).

Possible support materials will be made available by the teacher on the course website.

Note that the topics that are not explained in lectures, but are present in the indicated paragraphs of the textbook, are part of the exam programme.

Although this course is held in Italian, for Erasmus students, course material can also be available in English, and students can take the exam in English if they wish to do so.
