COURSE SYLLABUS

Measurement Methods and Ambulatory Assessment

2425-1-F5105P021

Learning area

RESEARCH METHODS IN EXPERIMENTAL PSYCHOLOGICAL SCIENCES

Learning objectives

Knowledge and understanding

Learning different methods for survey research (including ambulatory assessment) and indirect measures

Learning about the scale construction process and psychometric issues when creating a measure

Applying knowledge and understanding

Identifying the best methods to measure different concepts in different domains

Creating surveys and indirect measures using specific software

Contents

Presentation of examples of research in different domains related to survey research and especially scale construction and validation, to studies using ecological momentary assessment, and to implicit cognition research.

Group work or individual work for creating surveys and measures applied to different domains.

Detailed program

Survey and vignette research: scale construction process, psychometric properties and quality, creating a survey using Qualtrics.

Ecological Momentary Assessment method: construction process, psychometric properties and quality, creating a EMA survey using Qualtrics and an App and testing it.

Prerequisites

No specific prerequisites but the lab experience might be better if you take the Psychometrics (for statistics) in the same year than the lab.

Teaching methods

The course will be held in presence. Teaching will consist of lecture-based lessons (about 12 hours), in which the most important survey techniques will be presented, as well as interactive classwork (about 24 hours), that will include individual and group work for creating different types of surveys. Attendance is required.

Assessment methods

Students in small groups have to create a scale on a topic of their choice starting from the existing literature, then collect data, and examine the validity of the scale. The small groups have then to present their work orally with slides and each student has to provide an individual report on the work he/she/they produced within the group.
