

SYLLABUS DEL CORSO

Applied Psycholinguistics

2425-2-F5105P011

Learning area

Applied experimental psychological sciences

Learning objectives

Knowledge and understanding

- analysis of linguistic ambiguity (phonological, lexical, syntactic, semantic, pragmatic) from the point of view of (i) the architecture of language and (ii) the mechanisms underlying language processing in monolinguals and bilinguals
- analysis of the mechanisms of parsing of words and sentences and principles of language processing from the point of view of (i) theoretical implications (for models of language processing); (ii) practical applications (use of language in real communicative situations; evaluation of different targets, scopes and means of communication of the message)
- analysis of the experimental methodologies and paradigms used in the investigation of the mechanisms involved in language processing
- analysis of some of the current debates in psycholinguistics (for example, debate on bilingualism; debate on inclusive language)

Applying knowledge and understanding

- reasoning about the form (or forms) of language to express linguistic content for different situational needs, modalities or scopes
- evaluating experimental paradigms and tools for the investigation of language use and language comprehension, also in consideration of the population (e.g., monolinguals vs. bilinguals) and the linguistic features of the language under investigation
- reasoning about implicit content triggered by linguistic items and analysis of non-literal interpretations

- interpreting behavioral measures (reading/reaction times measures, implicit measures of processing such as eye-tracking measures)
- analyzing scientific reports critically
- implementing testable hypothesis of research on language

Contents

The course provides an overview of the mechanisms underlying the processing of language focusing on (i) the different models of language processing in an up-to-date perspective; (ii) the different experimental techniques and paradigms used in psycholinguistic research; (iii) the current experimental research questions and the current debates about the use and processing of language in monolingual (and bilingual) adults

Detailed program

- Basic concepts in linguistics and basic tools to represent linguistic structures and interpretations
- On-line processing of spoken languages
- Prediction and anticipation in language
- Experimental methods and techniques used in psycholinguistics to investigate different linguistic phenomena
- Lexical access and representation in monolingual and bilingual adults
- Discussion of current topics of research on bilingualism, and cross-linguistic interference effects
- Discussion of recently debated topic, such as inclusive language efficacy and feasibility

Prerequisites

A background in linguistics is **not** required; the background information necessary to follow the course will be provided during the course.

Teaching methods

The course will be held in presence. Teaching will consist of lecture-based lessons, and also interactive classwork that will take place through the discussion of scientific articles, presentations and comments, practical exercises, and discussions on the course topics.

Assessment methods

The exam is **written** and comprises:

- open questions in order to assess the acquisition of theoretical notions and the ability to extend this competence to cases of real communication;

- multiple choice questions in order to assess the acquisition of theoretical basic notions;
 - the analysis of one of the graphs discussed in class, in order to assess the ability to interpret and discuss psycholinguistic data, as well as their theoretical impact on models of parsing;
 - a series of exercises in which the student is required to extend the knowledge acquired to real examples of use of language
- A written examination will be offered at the end of the course (in May).

For students attending lessons on a regular basis, an ad-hoc examination and evaluation will be offered, as detailed below:

- Active participation in class discussions: (10% of the final grade)
- Mid-term (flexible) assignment: Presentation in class consisting in the critical analysis of a scientific paper related to the topics discussed in class (prior approval of the instructor) (20% of the final grade)
- End-term examination on course content, as detailed above (70% of the final grade)

Textbooks and Reading Materials

Sedivy, J. (2019). *Language in mind: An introduction to psycholinguistics*. Oxford University Press, 2nd edition (the first 2014 edition is also fine). **selected chapters (these will be detailed in class)**

Additional reading material (including scientific papers) will be specified during the course.

Sustainable Development Goals

GENDER EQUALITY | REDUCED INEQUALITIES
