SYLLABUS DEL CORSO

Biologia Cellulare

2425-1-H4601D066-H4601D090M

Aims

Provide the tools for understanding the molecular mechanisms that control cell division and differentiation, with particular regard to the alterations of these same mechanisms that are involved in human diseases

Contents

Structure and function of the cytoskeleton, adhesion mechanisms between cells and the extracellular matrix, the communication between cells in multicellular organisms (endocrine, paracrine, autocrine), signal transduction, cell cycle and its control mechanisms, apoptosis, mitosis and meiosis, crossing-over and genetic consequences, X chromosome inactivation, principles and consequences of genomic imprinting and mitochondrial inheritance, multifactorial inheritance, cancer genetics; the immunogenetics and the generation of antibody diversity.

Detailed program

Structure and function of the cytoskeleton; adhesion mechanisms between cells and the extracellular matrix; endocytosis and exocytosis; the communication between cells in multicellular organisms (endocrine, paracrine and autocrine regulation); signal transduction and the central role played by protein kinases; cell cycle and its genetic control; apoptosis; mitosis and meiosis; crossing-over and genetic consequences; Cell differentiation: embryonal and adult stem cells; Sex determination; and implications for X chromosome inactivation in the manifestation of syndromes and genetic diseases; principles and consequences of genomic imprinting and mitochondrial inheritance; multifactorial inheritance; cancer genetics: genes that contribute to the onset of cancer (Rb1, p53, and WT1); the immunogenetics and the generation of antibody diversity

Prerequisites

Basic Sciences course

Teaching form

20 2 hours-lectures composed by:

- a section of delivered didactics (Didattica erogativa, DE) focused on the presentation-illustration of contents by the lecturer.
- a section of interactive teaching (Didattica Interattiva, DI) including teaching interventions supplementary to delivered didactic activities, practical applications and in itinere test

Didactic activities are conveyed by means of face-to-face lectures

Textbook and teaching resource

MAIN TEXTBOOK

G. De Leo, E. Ginelli, S. Fasano. *Biologia e Genetica* EdISES, 2020

Additional resources

- H.Lodish, A. Berk, S.L. Zipursky, P. Matsudaira, D. Baltimore, J. Darnell. *Molecular cell biology*, Ed. FREEMAN, 9. ed. del 2021
- G. Karp. *Biologia cellulare e molecolare* 3°ed EDISES, 2021
- Strachan. *Genetica Molecolare Umana*, Zanichelli 2021
- P.J.Russell. *Elementi di Genetica*, 2 edizione Edises 2016

B. A. Pierce. *Genetica*. 2 edizione ZANICHELLI, 2016

PPT slides from frontal lectures

Semester

Second semester

Assessment method

The assessment of this module will take place together with the other modules of this course. Written test multiple choices and open shorts questions

Office hours

By appointment
