

UNIVERSITÀ
DEGLI STUDI DI MILANO-BICOCCA

COURSE SYLLABUS

Clerkship 6

2425-4-H4102D089

Aims

The student will attend the wards and outpatient departments of Respiratory Medicine, Cardiovascular Medicine, Cardiac Surgery and Vascular Surgery to acquire the first clinical skills in the management of these patients. Furthermore, for cardiac surgery and vascular surgery, attendance at the relevant operating rooms is also required.

Contents

Respiratory Medicine

The clerkship will cover the most important aspects related to the commonly Respiratory diseases. Students will acquire the basic knowledge required to take history and recognize acute and chronic respiratory failure and obstructive and restrictive diseases signs and symptoms. Students will take part to both outpatient and inpatient clinical activity, including attendance in pulmonary function tests laboratory. Alongside the medical staff they will improve skills in carrying out the physical examination and in the indications for the prescription and interpretation of arterial blood gas analysis and chest radiological imaging.

Cardiovascular Medicine

The clerkships will cover the most important aspects related to the commonly encountered pathologies of the cardiovascular system. Students will acquire the basic knowledge required to recognize myocardial ischemia symptoms, heart failure signs/symptoms, patient with cardiac arrhythmias, valvular heart disease, and congenital heart disease.

Cardiac Surgery

The clerkship will cover the most important aspects related to surgical treatment of ischemic, valvular and congenital heart diseases.

Students will acquire the basic knowledge required to recognize the main cardiac pathologies suitable of surgery and the most important technical procedures.

Vascular Surgery

The assignment will concern the most important aspects relating to the surgical treatment of pathologies of the venous and arterial vessels.

Students will acquire the basic knowledge necessary to recognize the main pathologies subject to surgical intervention and the most important technical procedures.

Detailed program

Respiratory Medicine

- Take a history, perform a physical examination on patients with pulmonary diseases such as asthma, chronic obstructive pulmonary disease, interstitial lung disease, pulmonary hypertension, pulmonary embolism, pneumonia and respiratory failure and basic concept of their clinical management
- Take a history, perform a physical examination on patients with pleural diseases such as pleurisy and pneumothorax and basic concept of their clinical management
- Take a history, perform a physical examination on patients with pleuropulmonary cancer and indication to diagnostic procedure such as Thoracentesis, Trans thoracic biopsy and Bronchoscopy
- Know the main bronchopulmonary diseases secondary to exposure to smoke
- Indication and basic concepts of interpretation of pulmonary function tests including spirometry, lung volumes, diffusing capacity of carbon monoxide and exhaled nitric oxide detection
- Chest plain radiograph, CT-scan and US in pulmonary diseases: indication and relevant findings
- Basic concept about prescription of oxygen therapy and non invasive ventilation
- Use of personal protective equipment in the patient with respiratory infection

Cardiovascular Medicine

- Clinical approach and management of the patient presenting with myocardial ischemia symptoms
- Clinical approach and management of the patient presenting with heart failure signs/symptoms
- Clinical approach and management of the patient presenting with cardiac arrhythmias
- Clinical approach and management of the patient with valvular heart disease
- Clinical approach and management of the patient with congenital heart disease

Cardiac Surgery

- Clinical approach and management of the patients presenting with ischemic, valvular or congenital heart diseases in the cardiac surgery ward.
- Basic concepts regarding surgical treatment of coronary artery diseases.
- Basic concepts regarding surgical treatment of mitral, aortic and tricuspid diseases.
- Basic concepts regarding surgical treatment of congenital heart diseases.

Prerequisites

Basic Clinical Skills course

Basics concepts of anatomy and physiology of the respiratory system and cardiovascular system

Basic knowledge of fundamentals of biology, genetics, morphology, histology, pharmacology, physiology of the cardiovascular system

Teaching form

All courses include interactive teaching and direct observation of ward and/or operating room activities.

Respiratory Medicine

Practical guided observation activities with briefings and debriefings by hospital tutors of Respiratory Medicine Unit

Cardiovascular Medicine

Practical guided observation activities with briefings and debriefings by hospital tutors

Interaction with patients will be in the Italian language

Interaction with tutors will be both in the Italian and in the English language

Cardiac Surgery

Practical guided observation activities with briefings and debriefings by hospital tutor

Practical teaching in Cardiac Surgery Ward and in the Operating Room

Vascular Surgery

Practical guided observation activities with briefings and debriefings by hospital tutor

Practical teaching in Cardiac Surgery Ward and in the Operating Room

Textbook and teaching resource

to be defined by the tutor

Semester

First Semester 4th year

Assessment method

Frequency of assigned activities, observation and suitable/unsuitable evaluation of the practical skills linked to the individual courses.

Office hours

Email appointment
