## SYLLABUS DEL CORSO

### Cognitive Traps and Medical Decision Making

2425-3-H4102D124

---

#### Aims

Human decision-making is continuously threatened by a myriad of psychological phenomena throughout the process. Understanding and learning how to safeguard decision-making in the medical profession is crucial for medical students. This course aims to provide students with the foundational knowledge and tools necessary to gain greater awareness and control over their decision-making processes. By exploring the interplay between cognitive traps and medical decisions, students will learn how to mitigate errors and enhance their clinical judgment.

#### Contents

This course delves into the decision-making processes through the lens of social science. We will examine why people make the decisions they do and, within a framework that promotes a shared decision-making approach in medicine, consider research-based methods to improve decisions in healthcare settings. Topics covered will include basic notions of normative and descriptive theories of decisions, cognitive biases in decision-making, the moral psychology of choice, and insights from behavioral economics.

#### Detailed program

The following contents will be covered:

1. Dealing with Uncertainty: Introduction to Decision Theory  
Fundamental concepts of decision theory  
Understanding risk and uncertainty in medical contexts

2. The Subjective Expected Value
  - Calculating and interpreting subjective expected values
  - Applications in clinical decision-making
3. Cognitive Traps: Heuristics and Biases in Medical Decision-Making
  - Common cognitive biases (e.g., availability, anchoring, confirmation bias)
  - Strategies to recognize and mitigate biases
  - Nutges in Healthcare
4. Moral Psychology of Choice
  - Ethical considerations in medical decisions
  - Moral dilemmas and frameworks for ethical decision-making
5. Insights from Behavioral Economics
  - Principles of behavioral economics relevant to healthcare
  - Impact of economic behavior on medical decisions
6. Shared Decision-Making in Medicine and the Role of Decision Aids
  - Principles and practices of shared decision-making
  - Development and use of decision aids to support patient involvement

## **Prerequisites**

None, but a basic understanding of probability is helpful.

## **Teaching form**

Frontal lessons  
Interactive discussions  
Case study analysis  
Group activities

## **Textbook and teaching resource**

A selection of scientific journal articles will be provided.  
PPT slides and other relevant materials will be uploaded on the e-learning website.

## **Semester**

Second

## **Assessment method**

The students' level of knowledge and problem-solving abilities will be assessed through analysis and discussion of cases and fictional scenarios or multiple-choice questions.

## **Office hours**

To make an appointment, please contact:

[selena.russo@unimib.it](mailto:selena.russo@unimib.it)

Office: U38, villa Serena (Monza), room number 5.27, V floor

## **Sustainable Development Goals**

GOOD HEALTH AND WELL-BEING
