DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### Neurochirurgia

2425-5-H4101D329-H4101D193M

---

#### Aims

The goal of the course of Neurosurgery is to lead the student to know the etiology, physiopathology, prognosis, diagnosis and treatments of the main neurosurgical diseases that a Medical Doctor could face in an elective and emergent scenario.

#### Contents

Intracranial hypertension

CSF dynamic and pathology

Cerebrovascular neurosurgical diseases

Brain and spine trauma

Brain tumors

Spinal degenerative disease

New technologies in neurosurgery

#### Detailed program

Intracranial hypertension: physiopathology, diagnosis and treatment

CSF dynamic and pathology: hydrocephalus etiology and possible treatments

Cerebrovascular neurosurgical diseases: cerebrovascular malformations and spontaneous intracranial bleedings.

Brain and spine trauma: multidisciplinary management

Brain tumors: clinical and radiological features and treatment principles

Spinal degenerative disease

New technologies in neurosurgery

## **Prerequisites**

Knowledge of propedeutical courses: anatomy, physiology, biochemistry, general pathology, pharmacology

## **Teaching form**

Frontal lessons

## **Textbook and teaching resource**

Malattie del Sistema Nervoso, Carlo Ferrarese et al McGraw-Hill, Seconda edizione 2016 Collana "Core Curriculum", 2011

Hauser S.L. Harrison Neurologia Clinica Ed. McGraw-Hill, I edizione italiana 2006

Ropper A.H. Adams e Victor Principi di Neurologia Ed. McGraw-Hill, VIII edizione italiana 2006

Fazio C. e Loeb E. Neurologia di Fazio Loeb Ed. Società Editrice Universo, IV edizione, ristampa 2005

## **Semester**

5th year first semester

## **Assessment method**

see general Syllabus of the Course

## **Office hours**

by appointment  
email [carlo.giussani@unimib.it](mailto:carlo.giussani@unimib.it)

## **Sustainable Development Goals**
