

SYLLABUS DEL CORSO

Innovazione Organizzativa

2425-2-E1601N064

Learning objectives

Knowledge and understanding

Knowing the different forms of organizational innovation, their patterns of diffusion and their main social and economic implications.

Applying knowledge and understanding

Ability to evaluate the nature and the relevance of organizational innovations.

Contents

The course deals with the issue of organizational innovation, addressing different dimension of this concept:

- The sociological understanding of the concept of economic innovation
- Product innovation
- Process innovation
- The diffusion of innovations
- The social consequences of organizational innovation

Detailed program

The program of course is divided into four modules. The first module will develop in-depth analysis of the concept of organizational innovation, illustrating its various forms and the main sociological theories that tackles its origin and significance.

The second module focuses on product innovation, considering the forms of measurement and diffusion dynamics.

The third part of the course is instead focused on process innovation. It investigates innovation as an internal organization process and innovation as a broader phenomenon that affects a given sector or context.

The last part of the course is devoted to the analysis of the social consequences of organizational innovation, in relation to the labor market and welfare systems, economic growth and environmental sustainability.

Prerequisites

Basic knowledge of organizational theory

Teaching methods

The course will include lectures delivered in the form of traditional teaching for approximately 70% of the hours. The remaining teaching hours will be conducted using the integrated teaching method, through exercises and group work in the classroom.

Assessment methods

Written exam, with:

10 multiple-choice questions;

2 open-ended questions

The time allocated for the exam is 60 minutes.
