DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### Laboratorio per L'analisi della Qualità Biologica

2425-3-E3201Q112

---

#### Aims

The course provides theoretical and practical knowledge for the evaluation of biological quality in aquatic environments, with particular reference to the presence of potentially dangerous compounds and pathogenic microorganisms.

The theoretical and practical methods provided in the course are aimed at an immediate job placement or preparatory for master's studies. In particular, the most frequently used procedures in the toxicological and microbiological analysis of surface water, urban and industrial wastewater are deepened.

The provided notions will be framed in the regulatory framework of the Consolidated Environmental Act 152/2006 and subsequent amendments.

#### Contents

Analysis of the biological quality of surface, wastewater and drinking water by means of toxicological and microbiological tests

#### Detailed program

The course will be divided into lectures, exercises and multidisciplinary laboratories.

During lectures the basic notions will be introduced regarding:

- acute and chronic toxicological tests
- description of the main toxicological tests on aquatic organisms (*Daphnia magna*, *Ceriodaphnia dubia*, *Selenastrum capricornutum*, *Aliivibrio fischeri*, *Artemia salina*, *Danio rerio*)
- the concept of dose/response
- introduction to cellular models for the evaluation of effects on humans (hepatocytes and monocytes)

- description of toxicological tests relevant to human impacts (activation of cytochromes and release of inflammatory mediators)
- analysis of the contents of international standard tests (OECD)
- toxicological endpoints (EC50, EC10, LOEC, NOEC)
- the concept of sterility in working with microorganisms
- soils for microbiological crops.

**\*\*Laboratories \*\***

You will learn methods for:

- The quantification of total bacteria, faecal coliforms and other microbiological indicators of fecal contamination;
  - the characterization and identification of microorganisms, with particular reference to bacteria of fecal origin, through biochemical tests (staining and observation under a microscope, enzymatic tests, tests for the recognition of coliforms);
  - the extraction of DNA from environmental samples;
  - the use of PCR in the microbiological field for the analysis of taxonomic markers and the search for pathogens;
  - the extraction of DNA from environmental samples;
  - the use of PCR in the microbiological field for the analysis of taxonomic markers and the search for pathogens;
  - the application of standard tests (OECD and ISO protocols) for the evaluation of toxicity on aquatic and multicellular organisms and on in vitro models, will be conducted
- o biochemical analysis for the evaluation of potential effects on humans (extraction and quantification of proteins and activation of cytochromes).

**Tutorials on:**

- basic statistical techniques for the calculation of dose-response curves and effect concentrations (LC50, LC10, EC50, EC10, IC50 and IC10).
- molecular techniques for microbiological analysis

## **Prerequisites**

No basic skills required

## **Teaching form**

The course is composed of:

- a) 6 two-hour lectures, in person, Delivered Didactics;
  - b) 2 two-hour lectures, in person, Interactive Teaching;
  - c) 5 four-hour lab activities, in person, Interactive Teaching;
  - d) 3 four-hour practical classes, in person, Interactive Teaching;
  - e) 2 three-hour practical classes, in person, Interactive Teaching;
  - f) 1 two-hour practical class, in person, Interactive Teaching.
- All types of didactic delivery are supervised by the lecturer.

## **Textbook and teaching resource**

Slides (available on e-learning); additional material provided by the teachers

## Semester

Second semester

## Assessment method

Oral examination at the end of the course, ON THE TOPICS COVERED IN THE LECTURES.

There will be NO in-class tests. Oral exam at the end of the course.

The evaluation criteria that the examination board will use to evaluate learning consist in the direct verification of the acquisition by the student of the topics covered during the lectures and related to the program carried out in the laboratories and exercises.

The questions will aim to ascertain the acquisition of basic skills and to evaluate the understanding of the concepts and technical / practical methods addressed in the laboratories, the ability to connect the different topics covered. In detail, the following aspects will be assessed during the oral exam:

1. **Knowledge and understanding** . At the end of the course the student will have to know: the methods of assessing the quality of water from an eco-toxicological and microbiological point of view; the main international and national standard tests, framed in current legislation; the methods used for work in infertility; the main cellular models for the evaluation of toxic effects on humans.
2. **Ability to apply knowledge and understanding** . The student must be able to apply the knowledge acquired in the frontal part of the teaching demonstrating that they are able to carry out the toxicological and microbiological tests learned in the laboratory. Furthermore, at the end of the course, the student must be able to describe how to calculate the dose-response curves for the evaluation of toxicity effects.
3. **Autonomy of judgment** . The student should be able to evaluate the biological quality of an aqueous matrix by examining the results of specific tests conducted on a water sample.
4. **Communication skills**. At the end of the course the student will be able to describe in an appropriate way the topics studied using the correct specific vocabulary.
5. **Learning skills**. At the end of the course the student will be able to consult the literature on the topics covered and the reference legislation. He will also be able to independently design a protocol for analyzing the biological quality of a water sample.

There are no intermediate tests.

Vote expressed in thirtieths: 18-30/30

## Office hours

by appointment, sending an email to [sara.villa@unimib.it](mailto:sara.villa@unimib.it), [isabella.gandolfi@unimib.it](mailto:isabella.gandolfi@unimib.it) or [maurizio.gualtieri@unimib.it](mailto:maurizio.gualtieri@unimib.it)

## Sustainable Development Goals

## CLEAN WATER AND SANITATION
