SYLLABUS DEL CORSO

Responsibility and Ai

2425-2-F551MI044

Learning objectives

The course dwells into the regulation of responsibility of artificial intelligence (AI) within the EU legal order in its first part and under European and comparative private law in the second one. Therefore, the course will focus first on the attempts to regulate the responsibility of AI at EU and Council of Europe level. It will then consider the responsibilities and liabilities of AI providers as well as the revision of the relevant rules (product liability directive as well as the proposals on adapting non-contractual civil liability rules to artificial intelligence (AI Liability Directive)). Risk management and insurance coverages of activities involving AI will be considered, especially applied to some sectors (i.e. smart mobility and medical activities).

Contents

The course will guide students into the knowledge of elements of advanced EU law and advanced comparative private law about the contractual and non contractual liabilities arising from the use of artificial intelligence. This will include the exam of EU, international and national relevant legislation and approaches, empowering students to solve complex legal problems arising from the innovative field of liability arising from the use of AI, as well as the legal questions of the responsibility of AI itself.
