DEGLI STUDI DI MILANO-BICOCCA

## SYLLABUS DEL CORSO

### Relatività Generale

2425-1-F1701Q084

---

#### Aims

This course will allow students to understand:

- the physical and mathematical underpinnings of general relativity;
- black hole physics;
- the foundations of cosmology.

#### Contents

1. Principles and equations of general relativity.
2. Elements of differential geometry.
3. Black hole physics.
4. Elements of cosmology.

#### Detailed program

1. Summary of special relativity. Minkowski spacetime.
2. Equivalence principle. Accelerated observers.

3. Elements of differential geometry. Curvature. Geodesics.
4. Physics on curved spaces. Curvature and gravity. Einstein's equations. Rudiments of Hamiltonian treatment. Vielbein formalism.
5. Gravitational waves. Black holes: Schwarzschild, charged, rotating solutions. Definition of mass in general relativity. Causality.
6. Elements of cosmology. De Sitter and anti-de Sitter spaces.

## **Prerequisites**

Undergraduate degree in physics.

## **Teaching form**

24 2-hour lectures, delivered didactically, in presence. In English.

## **Textbook and teaching resource**

Lecture notes available at <https://www.dropbox.com/s/t84lftb2llgb87w/GR.pdf?dl=0P>

## **Semester**

First semester

## **Assessment method**

Written exam. Five open questions, five exercises, three hours. Object of evaluation will be the logic used in the resolution of the problems.

It is possible to hold the exam in English.

## **Office hours**

By appointment
