SYLLABUS DEL CORSO

Teoria Quantistica dei Campi II

2425-1-F1701Q134

Aims

To complete the study of QFTs by developing the functional approach to thoeries with amtter (fermions) and gauge theories, which describe fundamental interactions. Deepen the knowledge of the main properties of QED and QCD. Become familiar with advanced topics in QFT.

Contents

Functional approach to theories with fermions and gauge theories. Perturbative renormalization of QED and QCD. Renormalization group for gauge theories. Anomalies.

Detailed program

Wilsonian effective action. Classification of composite operators.
Functional methods for fermions. Integration on grassmannian variables. Yukawa theory: one-loop renormalization.
Discrete symmetries: parity, time-reversal, charge conjugation. PCT theorem.
Gauge theories. Yang-Mills theories. Path integral formulation. Abelian and non-abelian cases.
Propagator of the gauge fields. Gauge fixing, Faddeev-Popov determinant and corresponding ghosts. BRST quantization.
Perturbative approach to path integral for gauge theories with scalar and fermionic matter. QED: Renormalization and beta functions for QED and QCD. Asymptotic freedom. Banks-Zaks fixed point.
Renormalizability of gauge theories with spontaneous symmetry breaking. Renormalizable gauges vs unitary gauge.
Symmetries, Ward-Takahashi and Slavnov-Taylors identities. The case of QED and QCD. Anomalies in QFT. Axial and chiral anomalies. ABJ anomaly: the triangle disgram. Fujikawa's method. Anomalies in gauge theories. BRST

approach to anomalies. Wess-Zumino consistency condition. Descent equations. 't Hooft anomalies. 't Hooft anomaly matching condition.
Dira monopole. Solitons in 2D. Dirac-Polyakov monopole in Georgi-Glashow model.
Instantons in gauge theories and theta-vacua.

Prerequisites

General Relativity, Theoretical Physics I,II, Quantum Field Theory I

Teaching form

Frontal lectures and class tutorials. There will be no remote teaching.

Textbook and teaching resource

M.E. Peskin, D.V. Schroeder, An introduction to Quantum Field Theory P. Ramond, Field Theory : A Modern Primer, 2nd Edition
M. Srednicki, Quantum Field Theory
T-P. Cheng and L-F. Li, Gauge Theory of Elementary Particle Physics D. Anselmi, Renormalizazion
S. Weinberg, The Quantum Theory of Fields I, II
R. Rajaraman, Solitons and Instantons

Semester

Second semester

Assessment method

Oral exam preceded by a short exercise to be solved in presence.
The final evaluation will take into account the level of comprehension of all the topics introduced in the course, the level of computational skills in QFT acquired, as well as scientific language skills and clarity of the answers.

Office hours

By appointment, sending an e-mail to silvia.penati@unimib.it

Sustainable Development Goals

QUALITY EDUCATION
