## Assessment methods

WRITTEN, with an optional oral exam.

The exam is conducted in written form, with an optional oral exam (which may be requested by the student).

The written test will be individual and will include a combination of closed and open-ended questions.

The closed questions, which are multiple-choice, aim to thoroughly assess the student's knowledge of the exam syllabus.

The open-ended questions are designed to evaluate the ability to express oneself using technical-disciplinary language.

The written test is considered passed if a score of at least 18/30 is obtained. It is not possible to take the optional oral exam without passing the written test.

After the written test, students may take a non-mandatory (optional) oral exam, which will cover the whole program.

The optional oral exam can only be taken during the same session in which the written test has been completed.

Exam registration is unique and therefore valid for the optional oral exam as well. All students must correctly register for the exam to avoid issues with the official recording of grades.

Once the written exam results are published, students can choose to accept or reject their grade or request to take an additional oral exam.
