SYLLABUS DEL CORSO

Economia degli Scambi Internazionali - 1

2526-3-E1801M045-E1801M062M-T1

Learning objectives

The two modules International Trade Economics and Global Markets aim to provide students with in-depth knowledge and understanding of the key issues in real international economics, including fundamental theories of international trade, trade policy analysis, multinational firms' strategies, and outsourcing processes.

The course fosters the development of applied knowledge and understanding, guiding students in the critical use of analytical tools to interpret contemporary global economic phenomena. Through case studies, exercises, and classroom discussions, students will acquire the ability to apply theoretical models to different economic contexts and to identify effective solutions to complex problems.

Independent judgement is encouraged. Communication skills are enhanced through classroom discussions, with particular attention to the ability to clearly and rigorously present one's analyses and conclusions.

Finally, the course promotes strong learning skills, by providing methodological and conceptual tools that enable students to autonomously explore complex topics and stay up-to-date with developments in the global economy.

Contents

- Trade theories
- Trade policies
- Multinational firms

Detailed program

PART ONE: INTERNATIONAL TRADE THEORY

World Trade: An Overview

Labor Productivity and Comparative Advantage: The Ricardian Model
