## COURSE SYLLABUS

### Clinical Developmental Psychology

2526-2-F5103P094

---

#### Learning area

Atypical development

#### Learning objectives

##### *Knowledge and understanding*

- Knowledge of psychological and clinical interventions during development
- Techniques and methods of treatment of the main disorders that occur during childhood and adolescence

##### *Applying knowledge and understanding*

- Ability to identify the most appropriate psychological interventions in the developmental clinical psychology field
- Ability to pay attention to relational contexts (e.g., family, school) in the definition of a developmental psychological intervention

##### *Making Judgements*

Through sustained critical analysis of theoretical and clinical perspectives in the field of developmental psychopathology, the course promotes the development and strengthening of the ability to independently evaluate the usefulness of assessment and/or intervention methods in case of psychopathology in children or adolescents.

##### *Communication Skills*

The course enhances communication skills through ongoing in-class interaction during interactive activities. Students develop the ability to clearly express complex theoretical and practical concepts, to justify clinical decisions, and to engage in effective dialogue with colleagues and other professionals in the field.

### *Learning Skills*

The combination of lectures, interactive activities, and materials available on the e-learning platform enables students to develop autonomous and flexible learning strategies. This fosters the ability to independently deepen their understanding of the course content.

## **Contents**

By taking into account the developmental psychopathology perspective, the two modules will present the theoretical framework and the clinical methods for the assessment and treatment of psychopathological conditions in children and adolescents according to the cognitive-constructivist approach (Module 1) and the psychodynamic approach (Module 2). Students will be able to critically reflect on similarities, differences and the specificity of the two theoretical and clinical approaches.

## **Detailed program**

### Module 1:

- Clinical assessment procedures and tools used with children and their families: standardized scales (CBCL, Conners, Y-BOCS, ...), diagnostic interviews (Dawba, K-sads)
- Diagnoses in developmental age, including both descriptive and explanatory approaches, and an analysis of the symptoms according to their functional significance.
- Clinical applications of the model are presented to disorders associated with internalizing and externalizing psychopathologies in childhood and adolescence, including anxiety disorders, conduct disorders, oppositional defiant disorder, and depression. Among the main intervention models of cognitive constructivist and cognitive behavioral nature, special attention will be paid to parent training and teacher training interventions as well as manualized intervention models (for example, Coping Power Program, Circle of Security) .

### Module 2:

- L'approccio psicodinamico alla psicopatologia in adolescenza
- Aspetti centrali dell'assessment clinico in adolescenza secondo l'approccio psicodinamico
- La patologia della personalità in età evolutiva: ricerca empirica e modelli clinici contemporanei

## **Prerequisites**

Knowledge of the essential topics of Developmental Psychology

A general knowledge of diagnostic systems (DSM-5, PDM).

Students lacking such basic knowledge are encouraged to ask for a list of essential references.

## **Teaching methods**

Lessons will be held in person and in Italian. A variety of teaching methods will be used in each lesson, including

explanations in front of the class and discussion in groups.  
Teaching materials will be available on the Course's e-learning page.

## **Assessment methods**

The Exam will consist of 20 multiple choice questions and 2 open-ended questions.  
The answers to the open questions will be evaluated in terms of correctness and completeness of the answer, argumentative capacity, and synthesis.

## **Textbooks and Reading Materials**

Detailed information about references will be published on the e-learning page of this course.

## **Sustainable Development Goals**

GOOD HEALTH AND WELL-BEING | GENDER EQUALITY | REDUCED INEQUALITIES
