SYLLABUS DEL CORSO

Econometrics

2526-1-F5603M003-F5603M003-2

Learning objectives

The course provides the basic skills to carry out empirical analysis in microeconomics and macroeconomics.

Contents

Students are introduced to the main issues arising in applied work for an economist.

Detailed program

- The simple regression model
- Multiple regression analysis: estimation, inference, asymptotics
- Multiple regression analysis: further issues
- Multiple regression analysis with qualitative information
- Heteroskedasticity
- More on specification and data problems
- Basic regression analysis with time series data
- Further issues in using OLS with time series data
- Serial correlation and heteroskedasticity in time series regressions
- Models based on Panel Data
- IV estimation and 2SLS
- Simultaneous equations models
- Models with limited dependent variables
- Advanced Time Series Topics

Prerequisites

Statistics, mathematics.

Teaching methods

Emphasis is placed on the use of econometric software packages as tools of quantitative and statistical analysis. Practical computer exercises are a key part of the course. Lectures conducted in delivery mode in the initial part and in interactive mode in the later part. All activities are conducted in presence.

Assessment methods

Assessment is based on either an in-progress test (individual written examination and presentation of a group econometric project) or a final test (individual written and oral examination and oral presentation of an individual econometric project).

Textbooks and Reading Materials

["Introductory econometrics: a modern approach"](#), by J.M. Wooldridge, Thompson South Western, Belmont, 5th ed.
