SYLLABUS DEL CORSO

Advanced Microeconomics

2526-1-F5603M005-F5603M005-1

Learning objectives

The course is an introduction to advanced microeconomic analysis. Topics will be covered in a rigorous formalised way but with continuous reference to economic intuition and graphic tools.

Students will familiarise with instruments that are the building blocks of economic theory and that they will encounter in future courses.

Contents

- Choice and Demand
- Uncertainty and Strategy
- Production and Supply
- Competitive Markets
- Market Failures

Detailed program

- 1) CHOICE AND DEMAND
 - Preferences and Utility

- Utility Maximization and Choice
- Income and Substitution Effects
- Demand Relationships among Goods

2. UNCERTAINTY AND STRATEGY

- Uncertainty
- Game Theory

3. PRODUCTION AND SUPPLY

- Production Functions
- Cost Functions
- Profit Maximization

4. COMPETITIVE MARKETS

- The Partial Equilibrium Competitive Model
- General Equilibrium and Welfare

5. MARKET FAILURE

- Monopoly

Prerequisites

This course in microeconomics relies on graphical analysis, elementary algebra as well as basic calculus. Hence some mathematical prerequisite are needed (references will be provided). An introductory microeconomics course is useful but not necessary.

Teaching methods

The course consists of 42 lecture hours. Strong interaction between teacher and students is expected. The course also benefits from the application of the relevant concepts through targeted exercises.

Slides of lectures will be posted on the elearning page, as well as tutorials.

Solutions to tutorials will be posted as we solve exercises during classes.

Lectures will be in presence, occasionally some may be streamed and possibly recorded. (contact the lecturer in advance if you have troubles attending)

Assessment methods

Written exam. Duration: 1,5 hours.

No midterm exam but an exam will be available during the break in november

The exam consists of two parts:

1-theory part: students have to concisely answer two out of three questions, a list of possible (but not comprehensive) questions is available on the e-learning page

2-exercises: students have to solve two out of three exercises which will be very similar to those solved during the course
